

جمهورية السودان

جامعة كرري

**Karary University**

برنامج درجة البكالوريوس في الصيدلة

# **Karary University**

## **Faculty of pharmacy**

Karary University, Faculty of Pharmacy

## **1. Mission:**

Our mission at Karary University's Faculty of Pharmacy is to contribute to the development and promotion of the community by preparing pharmacists with professional ethics who are knowledgeable about the most recent pharmacy concepts and therapeutic care. This lets them contribute to the growth of the pharmaceutical industry and improve the efficiency of the pharmaceutical care system at the local and regional level in hospital pharmacies, private pharmacies, pharmaceutical factories and companies, quality control labs, and research and development centers.

## **2. Values:**

### **2.1. Integrity / Transparency:**

The faculty of pharmacy at Karary University will operate as a community trust, supported and established by the community. We will be honest in everything we do and be good stewards of the resources we have.

### **2.2. Respect:**

We will respect our colleagues, our students, and our community. We treat others and their ideas in a manner that conveys respect as we discuss our differences. We will teach our students to respect their patients and co-patients, other members of the healthcare team, and their colleagues.

### **2.3. Compassion:**

Compassion defines a good pharmacist; it is at the very heart of all we do. We will look for students and faculty who have this trait and work to improve it through education, research, and service.

### **2.4. Collaboration/ Generosity/Partnership:**

Karary University's faculty of pharmacy will value what everyone in the region has to offer and believe our collaboration strengthens all. We will work to create partnerships with educational and health-related organizations that support our mission: to provide our students with an inter-professional education and to improve the health of the citizens of Khartoum State, Sudan at large, and neighboring African countries and other countries. We will share what we have learned with others and assist whenever possible to serve the people of our state, nation, and beyond.

## **2.5. Discovery and Scholarship:**

Discovery and scholarship are what differentiate academic pharmacy programs. Karary University will encourage its faculty and students to keep looking for and making new knowledge that will help people.

## **2.6. Student Friendly:**

Karary University's Faculty of Pharmacy is committed to students having an exceptional educational experience. It will seek feedback from students about improving the process of education; learn from their ideas; and provide educational services in a manner that respects students, supports their efforts to be good pharmacists and scientists, and provides a quality educational experience. Students will be partners in their education. The faculty of pharmacy at Karary University will try to get students to find a healthy balance between work and other activities.

## **2.7. Community Health:**

Karary University Faculty of Pharmacy is committed to playing a role in improving the pharmaceutical services and care of the community and to contributing to the development of the community. It will involve students, faculty, and staff in creating projects to increase awareness of community health and working with other organizations that strive for the same goal.

## **2.8. Social Responsibility:**

Our students, faculty members, and staff are part of a community, region, state, and world. Karary University's Faculty of Pharmacy will encourage all to get involved with their area, contribute to its wellbeing, and be active volunteers in bettering their lives. The Faculty of Pharmacy's educational focus will emphasize service to the community.

## **2.9. Best Practices:**

Karary University's faculty of pharmacy will not only teach our students that pharmacy is best if supported by sound scientific evidence but will also disseminate information to faculty and community pharmacists that will enable them to change practice as evidence dictates through the provision of access to library resources and continuing pharmaceutical information.

## **2.10. Quality:**

Karary University's faculty of pharmacy seeks to produce an educational experience of quality: quality in the delivery of pharmaceutical care and quality in our research and service efforts.

Also, the faculty and staff want to help students learn how to improve the quality of pharmacy practice.

### **2.11. Innovation:**

Innovation is the heart of the Faculty of Pharmacy, and thus it will be open to new ideas from faculty, students, and staff. It will seek out new ideas and evaluate them with open minds in order to continue to improve the efficacy of pharmaceuticals and health care and the health system.

### **2.12. Stewardship:**

The Faculty of Pharmacy has been entrusted with a great responsibility for the education of the next generation of pharmacists. This means that we have to live by our values and stay focused on our mission, which is to help people through education, research, health care, and community service.

### **2.13. Communication:**

The Faculty of Pharmacy wants to instill in our students an understanding that good communication is a large part of being a good pharmacist. It will work to develop communication skills in students. It will also remember that many people support the college from throughout the region, and we will work to not only communicate our progress but to listen to their feedback and hopes for the college. It will also communicate with students, faculty, other members of the healthcare team, and staff by listening to their ideas and sharing their plans.

### **2.14. Lifelong Learning:**

The Karary University faculty of pharmacy encourages students to understand that the process of growth and learning is continuous. It will look for faculty members who show a desire to learn and improve their work, create continuing education programs for the area, and teach students how to change their work based on new evidence.

## **3. Objectives:**

### **To enable the student to:**

1. Practice according to the internationally accepted code of ethics.
2. Accept the responsibility of continuing your professional education so that you can use advances in pharmaceutical sciences and get more postgraduate training in Sudan or elsewhere.

3. Start looking into local health problems, traditional medicinal plants, and other areas of medicine and/or pharmacy that interest you.

#### **4. Rationale and Justification:**

1. Provision of an innovative pharmacy education program by a Medical Education Institute with a very high calibre.
2. A good addition to the delivery of high-quality pharmaceutical services in a densely populated area such as Khartoum State.
3. Availability of a large number of pensioners with a wealth of experience in innovative pharmaceutical education and pharmaceutical service delivery.
4. Provision of extra chances in an innovative program of pharmaceutical education for a large number of Sudan General Certificate students who obtained very high percentages ( $> 75\%$ ) and yet failed to get a chance at university education.

# **Bachelor of Pharmacy**

## **Program Specification**

**1. Program Title:** Bachelor of Pharmacy

**2. Program Type:** Single

**3. Faculty / University:** Faculty of Pharmacy, Karary University.

**4. Department (s):**

**a- Departments affiliated to faculty of pharmacy:**

- Department of Pharmaceutics
- Department of Microbiology & Immunology
- Department of Pharmaceutical Chemistry
- Department of Pharmacognosy and Phytochemistry
- Department of Pharmacology & Toxicology
- Department of Clinical Pharmacy and Pharmacy Practice

**b- Medical courses related to faculty of pharmacy:**

- Biology, Anatomy, Physiology, Pathology, Research methodology, Biostatistics, First Aid and Molecular Biology and Biotechnology.

**c- University Requirements:**

- Mathematics, Physics
- English Language (I & II), Islamic studies (I & II), Arabic language (I & II) and Sudanese Studies.
- Computer Skills and Information Systems.
- Research Project.

## **Introduction:**

The establishment of a modern pharmacy program is a unique idea leading to the creation of complementary biomedical disciplines, which will be a model for the integration of health care education as well as for inter-disciplinary research. This will enable pharmacy students to study certain subjects of a clinical nature. Such studies and clinical rounds would make it easier for people to talk to each other and agree on what each knows. They would also make sure that the future pharmacist is seen as an important part of the healthcare team.

To keep peace and to meet the changing needs and demands of society and the profession, the pharmacy program is embarking on a teaching program to enable hospital settings. As both the theoretical and practical courses are intended to provide the opportunity for students to gain greater experience in patient-centered learning environments and to work cooperatively with other healthcare practitioners as practicing members of the health care team, it is the goal of the program to prepare pharmacists who can assume expanded responsibilities for the clinical use of drugs and assist in the provision of rational drug therapy.

The course is set up so that future pharmacists get a good education. It is based on a good inter-disciplinary science degree course that connects chemistry and biology.

### ***This program aims to: -***

1. Provide the community with highly qualified and professional pharmacists with skills and ethical values.
2. Give students a wide range of knowledge and experience so that they can use the scientific knowledge they've learned in their chosen area of pharmacy and put their knowledge of pharmacy into a wider social and scientific context.

3. Develop communication skills, time management skills, critical thinking skills, problem solving skills, decision-making skills, teamwork skills, and other skills using modern information technology to design and conduct research and develop the student's ability to learn, work effectively both independently and as part of a health care team, design and carry out experiments, assemble, analyze, and assimilate information, and disseminate information.
4. Promote a good understanding of the pharmacy profession and the role of pharmacists in multidisciplinary teams.
5. Apply the criteria of good laboratory practice (GLP) and good pharmaceutical manufacturing practice (GPMP) to various qualitative and quantitative analytical techniques to assure the quality of raw materials, procedures, and pharmaceutical products.
6. Get the knowledge and skills you need for designing, formulating, making, calculating, managing, promoting, and selling pharmaceutical products.
7. Learn the basic rules of disease pathophysiology and how to use medicine in a smart way to improve healthcare services based on evidence.
8. Provide information and awareness to the community and the patients concerning medication.
9. Implement the sense of self-learning for continuous improvement of professional knowledge and skills.

### **Program structure and contents**

- A. Program duration:** Five years into ten semesters (Total credit hours = 195).
- B. Program structure:** The Bachelor of Pharmacy program is completed in five years (ten semesters); each semester is made up of 14 weeks of full-time study.
- C. Admission policy:** The faculty complies with the admission regulations and requirements released by the Sudanese Ministry of Higher Education. The

admission to the program requires a general secondary school certificate with a major in biology and chemistry or an equivalent certificate from a foreign institute recognized by the Sudanese Ministry of Higher Education.

#### **D. Regulation for progression and program completion:**

- Pharmacy students spend five educational years, divided into ten semesters (each of 14 weeks), and each semester is followed by a practical, written, and oral exam.
- Students must attend lectures and practical lessons; their attendance in practical lessons must be not less than 75 % otherwise, and the department council prevents him/her from entering the written exam after approval from the faculty council.
- A minimum of 50% of the maximum grade is the passing grade for all courses.

- *Course grades are as follows;*

<b>Less than 50%</b>	<b>F</b>
<b>From 50%-59%</b>	<b>D</b>
<b>From 60%-69%</b>	<b>C</b>
<b>From 70%-75%</b>	<b>B</b>
<b>Above 75%</b>	<b>A</b>

- For the students to be transferred from one academic year to the next, he/she is required to have successfully passed in all subjects.

#### **E. Study plan:**

<b>Item</b>	<b>Number of hours</b>
<b>Program credit hours</b>	195 credit hours
<b>Field training program</b>	720 contact hours

#### **F. Continuous Training:**

- This training program is a compulsory program that is managed and regulated by the faculty staff according to the student summer training guide (Appendix 1).

- Every student should complete 720 contact hours of training in one of the following pharmacy settings:
  - 1- Community- or hospital-based pharmacies-based training.
  - 2- Field training in pharmaceutical factories.
  - 3- Clinical pharmacy department.
- *The training hours are classified as follow:*
  - 1- **Continuous Training-1:** A total of 160 contact hours in a community pharmacy (8 hours/5 days for 4 weeks) after completion of the second year.
  - 2- **Continuous Training-2:** A total of 240 contact hours, divided into training in a community and/or hospital pharmacy (8 hours/5 days for 4 weeks) and training in a pharmaceutical factory (8 hours/5 days for 2 weeks) after completion of the third year.
  - 3- **Continuous Training-3:** A total of 320 contact hours divided into training in a community and/or hospital pharmacy (8 hours/5 days for 6 weeks) and training in a pharmaceutical factory (8 hours/5 days for 2 weeks) after completion of the 4<sup>th</sup> year.
- The faculty training committee will evaluate each student individually based on the rules in the training guide.

#### **G. Assessment:**

<b>Intended Learning Outcomes (ILOs)</b>	<b>Method of achievement and assessment</b>
<ul style="list-style-type: none"> <li>• Knowledge and Understanding</li> <li>• Intellectual Skills</li> </ul>	<ul style="list-style-type: none"> <li>• Written and oral Exam</li> </ul>
<ul style="list-style-type: none"> <li>• Professional and practical Skills</li> <li>• Intellectual Skills</li> </ul>	<ul style="list-style-type: none"> <li>• Practical Exam</li> <li>• Summer Training</li> </ul>
<ul style="list-style-type: none"> <li>• Intellectual Skills</li> <li>• General and Transferable Skills</li> </ul>	<ul style="list-style-type: none"> <li>• Oral Exam</li> <li>• Team Work</li> <li>• Assignment</li> </ul>

## **The curriculum structure**

The college runs a B. Pharm. (Honours) degree in ten semesters of 14 weeks each, and an additional three weeks per semester are used for assessment.

### **First Year**

Semester 1			Semester 2		
Code	Title	Cr.	Code	Title	Cr.
PH111	Biology (zoology)	3	PH121	Gross Anatomy	2

#### 4. Islamic studies I

دراسات إسلامية 1	إسم المقرر
<b>PH114</b>	الرمز
2	ساعات معتمدة
28	ساعات الإتصال
	وصف المقرر:

يتناول المقرر مقاصد الشريعة الإسلامية  
الأهداف :

- 1 . التعريف بمقاصد الشريعة الإسلامية وغاياتها العظيمة ولتحقيق مصالح العباد في العاجل والأجل ودرء المفاسد عنهم في دنياهم وأخريهم .
- 2 . التعريف بالنظام السياسي في الإسلام ووجوب إقامته وفقاً لمفهوم النظام السياسي والإجتماعي المبني على ما دعا إليه الدين 3 . التعريف بالشوري والعدل والمساواة في الشريعة الإسلامية .
- 4 . التعريف بأن مقاصد الشريعة الإسلامية تتقسم إلى : مقاصد الخالق من الخلق ومقاصد الشارع من التشريع
- 5 . أن يعدد الطلاب مقاصد الشريعة الإسلامية المنحصرة في الضروريات الخمس .
- 6 . التعريف بمعنى الإمامة عند الفرق الإسلامية وأهل السنة والجماعة .
- 7 . التعريف بحقوق المسلم وواجباته المنبثقة من الشريعة الإسلامية

المواضيع النظرية والعملية :

أن يقوم الطلاب بكتابية بحوث تتضمن ما هو مقرر لهم :

- مقدمة في مقاصد الشريعة الإسلامية
- الإمامة وواجباتها
- حقوق المسلم وواجباته
- الشوري والعدل والمساواة

الجانب العملي : أن يقوم الطلاب بكتابية البحوث التي تدور حول هذه المواضيع المتقدمة .

المراجع :

- 1 . أبي يعلي محمد بن الحسين الفراء " الأحكام السلطانية "
- 2 . مصطفى جبلي " نظام الخلافة في الفكر الإسلامي "

## 5. Scientific English I

Course code	PH115
Credit hours	2Cr (2+0)
Contact hours	• Lectures (28hours)
Objectives	• This course is mainly study skills. It aims to give students a comprehensive guide to help them study effectively at university level. It also includes the most important grammatical items, which are the tenses. Besides some basic skills needed for writing effectively.

<b>Course content</b>	<p><b>Suggested Reading Topics:</b></p> <ul style="list-style-type: none"> <li>• The importance of learning English language.</li> <li>• Reading Effectively.</li> <li>• Time Management.</li> <li>• Good Listening in Classroom.</li> <li>• Using The Dictionary.</li> <li>• Writing Skills (punctuation marks and topic Sentence).</li> <li>• Note Taking.</li> <li>• Presentation.</li> <li>• Preparing and Taking Exams.</li> <li>• Using Library</li> </ul> <p><b>Grammar:</b></p> <ul style="list-style-type: none"> <li>• The grammar tenses.</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Attendance, assignment, and mid exam: 20%</li> <li>• Final exam: 80%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• Angela B. The A to Z of correct English. ANGELA BURT; 2002.</li> <li>• Chesla E. Write better essays in just 20 minutes a day 2nd edition.3-Glenn D. (200).</li> <li>• Darragh G. A to Zed, A to Zee-A guide to the differences between British and American English. Editorior Stanley; 2000.</li> </ul>

## 6. Arabic Language I

<b>لغة عربية 1</b>	<b>إسم المقرر</b>
<b>PH116</b>	<b>الرمز</b>
<b>2</b>	<b>ساعات معتمدة</b>
<b>28</b>	<b>ساعات الاتصال</b>

**وصف المقرر:**

يعمل هذا المقرر على معالجة مشكلات الطلاب الأساسية في اللغة العربية من خلال وحدات متكاملة في الصوت والكلمة والتركيب والدلالة .

**الأهداف :**

- 1 . إتقان المهارات الأساسية في اللغة العربية محادثة وكتابة وتدريب الطالب على إتقان النطق الصحيح .
- 2 . معالجة المشكلات التي يعني منها الطالب في الكتابة الإنسانية والأخطاء الإملائية .
- 3 . معرفة صفات الأصوات ومخارجها .
- 4 . التدريب على الرسم الإملائي للهمزة والألف اللينة والباء المربوطة .
- 5 . الوقف على عناصر الاتصال اللغوي والتدريب عليها .

6 . إمام الطالب بأسس الكتابة الإنسانية .  
 7 . التدريب على استخدام الروابط والصيغة الأسلوبية .

**المواضيع النظرية والعملية :**

- اللغة : تعريفها وأهميتها وأنواعها .
- علاقة الدراسة اللغوية ببقية العلوم - الهندسة والفيزياء .
- القواعد الخطية : الهمزة ، علامات الترقيم ، الألف اللينة ، التاء المربوطة ، ما يوصل وما يفصل ....
- بناء الجملة وتحليلها ، الكتابة الإنسانية .
- المفردات النحوية - أنواعها واستعمالها ومعانيها ( الجارة والعاطفة )
- الصيغة والروابط الأسلوبية .
- المعاجم وطرق استعمالها .
- كتابة المقال العلمي .

**المراجع :**

- 1 . د . عباس محبوب ، د . عبدالنبي " المهارات اللغوية "
- 2 . عبدالسلام هارون " قواعد إملاء " .

## 7. Information system

<b>Course code</b>	PH117
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>• Lectures (28 hours)</li> <li>• Practical (42)</li> </ul>
<b>Objectives:</b>	<p>By the end of this course student will be able to:</p> <ul style="list-style-type: none"> <li>• Understand the concept, development, applications, types, and components of computer systems.</li> <li>• Discuss the representation and processing digital computers.</li> <li>• Learn the basics of computer programming.</li> </ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>• The computer concept.</li> <li>• The history of computer.</li> <li>• Overview of computer in human life (i.e. the effect of computer in human life), computer in (business, education, industry, medicine, entertainment and sport, home, communication, research and scientific fields).</li> <li>• Overview for the components of the computer systems:           <ol style="list-style-type: none"> <li>1. Hardware (input devices, output devices, memories, storage media, central processing unit, buses and etc.)</li> <li>2. Software               <ol style="list-style-type: none"> <li>i system software, application software</li> <li>ii Microsoft office (Word, PowerPoint, Excel).</li> <li>iii Opteron system windows.</li> <li>iv Network.</li> <li>v Security and safety.</li> </ol> </li> </ol> </li> <li>• An Overview of computers (digital computers, analogue computers, hybrid computers, super computers, mainframe computers, minicomputers, personal computers, multi-user computers, etc.)</li> <li>1. Information representation in digital computers (characters, numeric information, machine instructions, images, etc.)</li> <li>2. Introductions to computer programming           <ol style="list-style-type: none"> <li>a. Review for development of programming language</li> <li>b. Review of programming methods.</li> <li>c. Simple discussion for algorithm concept, variable and control structure)</li> </ol> </li> </ul> <p>Definition and benefits of computer network and internet</p>
<b>References</b>	<ul style="list-style-type: none"> <li>• Commowick O, Istance A, Kain M, Laurent B, Leray F, Simon M, Pop SC, Girard P, Ameli R, Ferré JC, Kerbrat A. Objective evaluation of multiple sclerosis lesion segmentation using a data management and processing infrastructure. <i>Scientific reports</i>. 2018 Sep 12;8(1):1-7.</li> <li>• Introduction to Computer Science. ## 8. Sudanese studies:

دراستات سودانية	إسم المقرر
PH118	الرمز
2	ساعات معتمدة
28	ساعات الاتصال

وصف المقرر:

يقوم المقرر على مسألة إدراك أو معرفة المكونات الجغرافية والتاريخية والاجتماعية والثقافية لجمهور السودان

الأهداف العامة:

1. اجلا الحقائق الجغرافية الأساسية عن السودان التي تدفعه للنهوض بدوره .
2. التعريف بالمعالم الأساسية في تاريخ السودان .
3. التعريف بخصائص المجتمع السوداني .
4. التبصير بالأخلاق والقيم الفاضلة الموروثة .
5. تقوية الإحساس الوطني ودعم التماسک الاجتماعي في السودان .

المواضيع النظرية والعملية :

- تكوين وتطور الدولة السودانية
- الحضارات القديمة .
- دراسة الملاحم والبطولات الوطنية .
- الشخصية السودانية ومكوناتها وأ الأخلاق والقيم والعادات والتقاليد السودانية .
- مكونات الثقافة السودانية ومظاهر الثقافة السودانية ودورها في تعزيز الهوية الوطنية .
- علاقة السودان الخارجية - الدور الإقليمي - الدور العالمي .

العملي :

- زيارة علمية لمواقع الآثار والحضارات في السودان .

المراجع :

- 1 . د . فدوی عبدالرحمن علي طه " السودان في عهد الحكم الثنائي " 1899-1956
- 2 . جابريل ، د. واربيرج ترجمة حذيفة الصديق عمر " اختلاف الرؤى التاريخية في وادي النيل
- 3 . الأب جيوفاني فاشين " المسيحية في السودان "
- 4 . أحمد باكير سيدابي " الدراسات السودانية "
- 5 . د . المعتصم أحمد الحاج " لمحات من تاريخ السودان في عهد الحكم الوطني "
- 6 . حسن نجيلة " المذكرات لحسن نجيلة "
- 7 . أي مواد ثقافية وتعريفية بالسودان والمكتبات العامة

## Semester II

### 1. Gross Anatomy

<b>Course code</b>	<b>PH121</b>
<b>Credit hours</b>	2Cr (2+0)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (28hours)</li></ul>
<b>Objectives</b>	<ul style="list-style-type: none"><li>At the end of this course the student will be able to describe the human body systems and relate them to the function.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>General introduction to anatomy</li><li>Skeletal system, Muscular system, Nervous system, Cardiovascular system</li><li>Gastrointestinal system, genitourinary system, Endocrine system.</li><li>Respiratory system, Lymphatic system, Immune system</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>Attendance, assignment, mid exam: 20%</li><li>Final exam: 80%</li></ul>
<b>References</b>	<ul style="list-style-type: none"><li>Warwick R, Williams PL, Dyson M, Bannister L. Gray's anatomy.</li></ul>

### 2. Pharmaceutics I

<b>Course code</b>	<b>PH122</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (28 hours)</li><li>Practical (42 hours)</li></ul>
<b>Objectives</b>	<ul style="list-style-type: none"><li>At the end of this course the student should be able to:</li><li>Give an account of how pharmacy originated</li><li>Mention the basic reference materials</li><li>List down the most common delivery systems</li><li>Know and describe the systems of measurements</li><li>Calculate doses of drugs</li><li>Calculate isotonicity, osmolarity, sodium chloride equivalency and osmolality of liquid pharmaceutical preparations</li><li>Understand the distinction between different dosage forms</li><li>Practice the basic dispensing techniques</li><li>Perform standard weighing and measuring techniques</li><li>Read, interpret and obtain the formula for the prescription given</li><li>Compounding preparations</li><li>Label the preparation accordingly -writing reports.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>Introduction and history of pharmacy</li><li>Pharmaceutical reference systems</li><li>Interpretation of prescriptions or medication orders</li></ul>

	<ul style="list-style-type: none"> <li>✓ Systems of measurements: metric system, common systems</li> <li>✓ Posology geriatric and paediatric dose adjustment</li> <li>✓ Reducing and enlarging formulas</li> <li>✓ Dilutions and concentrations</li> <li>✓ Density, specific gravity and specific volume</li> <li>✓ Alligation alternate and medial</li> <li>✓ Calculations concerning sterile solutions Isotonic</li> <li>✓ Electrolytes and sodium chloride equivalents</li> <li>✓ Osmolality, osmolarity and equivalent weights</li> <li>• <b>Rate of flow of intravenous fluids (Insulin dosage, Heparin dosage)</b></li> <li>• <b>Calculations involving reconstitution of dry powders</b> <ul style="list-style-type: none"> <li>✓ Definition of generally used expressions</li> <li>✓ Dispensing a preparation, Storage of preparations</li> <li>✓ Containers labelling and package inserts</li> <li>✓ Preservation, sterilization and aseptic compounding</li> <li>✓ Colorants and flavours</li> <li>✓ Basic dispensing techniques</li> </ul> </li> <li>• <b>Weighing: Measurement of liquids</b></li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• Introduction and different sources of information</li> <li>• Basic equipment and instrumentation</li> <li>• Accuracy and measurement of pharmaceutical liquids and weights</li> <li>• Density, specific gravity and specific volume</li> <li>• Examples of dosage forms, syrups</li> <li>• Examples of dosage forms, aromatic water and spirits</li> <li>• Examples of dosage forms, suspensions</li> <li>• Examples of dosage forms, ointment and cream bases</li> <li>• Mixtures and lotions</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work: 20%</li> <li>• Mid-semester examination: 20%</li> <li>• End semester examination: 60%</li> </ul>
<b>Reference</b>	<ul style="list-style-type: none"> <li>• Pharmaceutical practice, latest edition, Churchill Livingstone, A. J. Winfield &amp; R. M. Richards</li> <li>• Aulton ME, Taylor K, editors. Aulton's pharmaceutics: the design and manufacture of medicines. Elsevier Health Sciences; 2013.</li> <li>• Brown HT. Remington's Practice of Pharmacy, 1956. Edited by Eric W. Martin and E. Fullerton Cook. Pharmaceutical Calculations, 10th edition, Williams &amp; Wilkins, M.J.Stoklosa &amp; H.C.Ansel</li> <li>• Calculation for pharmaceutical practice, 1st edition, Elsevier, A. Winfield &amp; I.Edafiogho</li> </ul>

### **3. Pharmaceutical botany**

<b>Course code</b>	<b>PH123</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>

<b>Objectives:</b>	By the end of this course student will be familiar with; <ul style="list-style-type: none"><li>• The principle of plant classification and the major classes of the plant kingdom.</li><li>• The difference between the plant and animal cells.</li><li>• The morphology and histology of plant organs.</li></ul>
<b>Course content</b>	<b>1. Introduction: characteristics of living things</b> <ul style="list-style-type: none"><li>• Difference between plants and animals</li><li>• Importance and scope of Botany</li></ul> <b>2. Plant nomenclature</b> <ul style="list-style-type: none"><li>• Subdivision of the phyla</li><li>• Botanical systems of classifications</li><li>• Taxonomic characters</li><li>• Chemical plant Taxonomy</li></ul> <b>3. The plant cell: Plant cell structure</b> <ul style="list-style-type: none"><li>• Cell differentiation and Ergastic cell contents</li></ul> <b>4. Plant Morphology and Anatomy</b> <ul style="list-style-type: none"><li>• Macroscopic and microscopic characters of the main plant organs: leaves, flower, seeds, fruits, roots and rhizome, barks &amp;woods</li></ul> <b>5. Plant physiology:</b> <ul style="list-style-type: none"><li>• Introduction: diffusion, osmosis &amp; photosynthesis</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Class tests, Seminars and Practical work 20%</li><li>• Mid-semester examination 20%</li><li>• End semester examination 60%</li></ul>
<b>Practical</b>	<ul style="list-style-type: none"><li>• Root modification</li><li>• Stem modification and buds</li><li>• Leaves</li><li>• Flowers</li><li>• Inflorescences.</li><li>• Fruits</li><li>• Types of tissues, anatomy of root and stem anatomy of flower and leaves</li></ul>

<b>References</b>	<ul style="list-style-type: none"> <li>• O'Neill MJ. Trease and Evans' Pharmacognosy. The Lancet. 1996 Dec 14;348(9042):1645.</li> <li>• Robbers JE, Speedie MK, Tyler VE. ## 5. Scientific English II

<b>Course code</b>	<b>PH125</b>
<b>Credit hours</b>	2Cr (2+0)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (28hours)</li></ul>
<b>Objectives</b>	The course aims at improving students" language generally and providing reading and listening material that encounter them while studying at the university and afterwards, bedside reading and listening to lectures in English.
<b>Course content</b>	<p><b>Reading:</b></p> <ul style="list-style-type: none"><li>Hospitals.</li><li>Taking Medical History I.</li><li>Taking Medical History II.</li><li>Examining patient.</li><li>Special Examinations</li><li>X- rays Dept.</li><li>ER Dept.</li><li>Investigations.</li><li>Making Diagnosis.</li><li>Treatment.</li><li>Nursing.</li><li>Lab Safety.</li></ul> <p><b>Grammar:</b></p> <ul style="list-style-type: none"><li>Word Formation</li><li>The Passive Voice.</li><li>Part of Speech: Adjectives &amp; Adverbs</li></ul> <p><b>Writing skills:</b></p> <ul style="list-style-type: none"><li>Technical &amp; Medical Reports.</li><li>Formal Letters &amp; CV.</li><li>Listening skills (Many Situations that may take place in Hospital).</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>Attendance, assignment, mid exam: 20%</li><li>Final exam: 80%</li></ul>
<b>References</b>	<ul style="list-style-type: none"><li>Angela B. The A to Z of correct English. ANGELA BURT; 2002.</li><li>Chesla E. Write better essays in just 20 minutes a day 2nd edition.3-Glenn D. (2000).</li><li>Darragh G. A to Zed, A to Zee-A guide to the differences between British and American English. Editorial Stanley; First Edition, Irún-Spain</li></ul>

## 6. Mathematics

Course code	PH126
Credit hours	2Cr (2+0)
Contact hours	<ul style="list-style-type: none"><li>Lectures (28 hours)</li></ul>
Objectives:	At the end of this course the student should be able to: <ul style="list-style-type: none"><li>Know the principles of applied mathematics.</li></ul>
Course content	<ul style="list-style-type: none"><li>Mathematical fundamentals</li><li>Dimensions</li><li>Introduction to calculus</li><li>Differentiation</li><li>Integration</li></ul>
Evaluation	<ul style="list-style-type: none"><li>Attendance, assignment, mid exam: 20%</li><li>Final exam: 80%</li></ul>
References	<ul style="list-style-type: none"><li>Bittinger ML, Beecher JA, Johnson BL. Introductory and Intermediate Algebra. Pearson; 2015.</li></ul>

## 7. Islamic studies II

إسم المقرر	دراسات إسلامية 2
الرمز	PH127
ساعات معتمدة	2
ساعات الاتصال	28

وصف المقرر:

1. يتناول المقرر علوم القرآن وعلوم الحديث

2. يتناول المقرر الحقائق الإيمانية التي جاء بها الشرع .

الأهداف :

1 . التعريف بعلوم القرآن : نزوله وجمعه ، وتفسيره والتعريف بالحديث وعلومه بإعتبارهما المصدرين الرئيسيان اللذان يرجع إليهما السلم في كل شأن يتعلّق بالعقيدة والشريعة والأخلاق والسلوك .

2 . التعريف بعلوم القرآن المختلفة من تفسير وأسباب نزول وإعراب وبلاغة .

3 . التبصير بالسنة الشريفة وعلومها وجمعها والإحتاج بها .

4 . التعريف بكيف كان نزول القرآن ؟

5 . دراسة كيف سلك المفسرون في تفسير القرآن حتى اكتملت علومه .

- 6 . التعريف بكيف دونت السنة الشريفة .
7. التعريف بكيف أصبحت السنة علومها محددة يعرف منها الحديث الصحيح من الضعيف ، ...الخ .
- 8 . التعريف بجملة الاصول ومجموعة الحقائق الإمامية أو العقيدة التي جاء بها الشرع ودعا العباد إلى الإيمان بها إيماناً يقيناً لا شك فيه والجزم بصحتها والإيمان بها .
- 9 . التعريف بان العقيدة الإسلامية تمثل الأساس الذي تبني عليه العبادات والأخلاق وتقدم به النظم .
- 10 . التعريف بان أعمما الإنسان مهما كانت لا قيمة لها إذا لم تقم على قاعدة الإيمان.
- 11 . التعريف بأن الإيمان بالله تعالى هو أصل العقيدة وأساسها وعليه تبني كل أصول الإيمان .
- 12 . بيان لماذا قدم الملائكة في الكتاب والسنة على ذكر الكتاب والتبنيين .
- 13 . ذكر الكتب التي ورد ذكرها من الكتاب والسنة وما تضمنته من القيم الأخلاقية والموازين الألهية .
14. أن يدرك أن الله سبحانه وتعالى أرسل الرسل وبعث فيهم الأنبياء ليهدوا الناس إلى الحق وما يحقق لهم السعادة في الدنيا والأخرة لئلا يكون للناس على الله حجة بعد الرسل .
- 15 . أن تدرك خصائص الرسالة المحمدية وما تميزت به عن سائر الرسالات الإلهية فهي الرسالة الخاتمة العامة لجميع البشر .  
المواضيع النظرية والعملية :  
1. أن يقوم الطلاب بكتابية بحوث تتضمن ما كان مقرر لهم :
  - مقدمة في علوم القرآن .
  - أصول التفسير : تفسير سوري الأعراف والتوبية
  - الحديث وعلومه .
2. أن يقوم الطلاب بكتابية بحوث تتضمن ما كان مقررًأ عليهم في أصول العقيدة والإيمان .  
3. أركان الإيمان ، الإيمان بالله وملائكته وكتبه ورسله واليوم الآخر والقدر خيره وشره .  
المراجع :
  - 1 . د. عبد الحي يوسف " الثقافة الإسلامية " جامعة الخرطوم .
  - 2 . د. أحمد محمد جلي " الثقافة الإسلامية : المصادر ، الأسس ، الخصائص ، التحديات " .
  - 3 . كتاب الأصول .
  - 4 . التفاسير المختلفة .
  - 5 . مناجع القطبان " مناهل العرفان .
  - 1 . 3 . بعض الكتب التي تضمنت أصول العقيدة .

## 8. Arabic language II

لغة عربية 2	اسم المقرر
PH128	الرمز
2	ساعات معمدة
28	ساعات الاتصال

وصف المقرر:

1. يحتوي هذا المقرر على ضوابط أدب التخاطب الشفوي والكتابي شكلاً ومضموناً ويعمل على تمكين الطالب من أساس الكتابة الإجرائية وفنونها والفرق بينهما وبين الكتابة العلمية والفنية .
2. يحتوي هذا المقرر على مجموعة من النصوص الأدبية الرفيعة والأساليب الأدبية والعلمية .

الأهداف العامة:

1. إتقان المهارات الأساسية في الكتابة الإجرائية .
2. تمية مهارة عرض المعلومات وحسن التعبير .
3. تربية ملكة القراءة والفهم والتذوق من خلال الآثار الأدبية والمظاهر الجمالية .
4. الوقوف على الأساليب ومكوناتها .
5. التمكين من استخدام المعاجم بأنواعها .

المواضيع النظرية والعملية :

3. التقارير .
4. الرسائل الإدارية وغيرها .
5. المصطلح والتعریب .
6. التلخيص أهدافه ومراحله .
7. أدب التخاطب الشفوي (المحاضرة والندوة والخطابة).
8. الأدب ودوره في الحياة العسكرية وعلاقته بالهندسة .
9. اللغة العلمية خصائصها وصفاتها .
10. نماذج لشعر الجهاد في السودان المعاصر .
11. الأخطاء الغوية وأنواعها وأسبابها وطرق علاجها .
12. الجوانب اللغوية في كتابة البحوث العلمية .
13. الأساليب – اللغة العربية .

14. الحجاج بن يوسف قائدًا وخطيباً .

15. الشعر ودوره في الحياة العسكرية .

16. زهير وابن زيدون نماذج .

17. المصطلح العلمي والتعريب

18. المقولات .

19. الممنوع من الصرف .

20. المعاجم والموسوعات .

21. المقامات والقصص .

**ملحوظة :**

22. الأعتماد على النصوص العلمية القديمة الرصينة .

23. التطبيق العملي لهذه الموضوعات تسعة مقالات على الأقل في الفصل علي أن تصح وترتدى إلى الطالب .

**المراجع :**

- 1 . د . عباس محجوب ، د . عبدالنبي " المهارات اللغوية "
- 2 . أحمد الشايب " كتابة الأسلوب "
- 3 . أحمد قبش " الكامل في النحو والإعراب "
- 4 . الجاحظ " البخلاء "
- 5 . المعجم الهندسي الموحد .
24. المصطلح العلمي وكيفية صياغته ، د. صالح العوة
25. ضرورة الكتابة في اللغة العربية ، د. أحمد قبش
26. تاريخ الأدب العربي د . شوقي ضيف .

# Second Year

## Semester III

### 1. Physiology I

<b>Course code</b>	<b>PH231</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28 hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives</b>	To provide knowledge and skills concerned with normal functions of different organs, tissues and the body systems.
<b>Course content</b>	<ul style="list-style-type: none"><li>• Introduction (body fluids, pH, buffers, membrane physiology)</li><li>• Blood</li><li>• Cardiovascular system</li><li>• Respiratory system</li><li>• Urinary system</li><li>• Gastrointestinal system</li></ul>
<b>Practical</b>	<b>Topics for consideration are:</b> <ul style="list-style-type: none"><li>• Units and concentrations (body fluids).</li><li>• Blood collection and blood film.</li><li>• Differential leucocytes count.</li><li>• Hb estimation</li><li>• Total leucocytes count.</li><li>• Total erythrocytes count.</li><li>• Blood groups.</li><li>• Blood pressure.</li><li>• ECG and its interpretation</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Class tests, Seminars and Practical work 20%</li><li>• Assignment 10%</li><li>• End semester examination 70%</li></ul>
<b>References</b>	<ul style="list-style-type: none"><li>• Guyton AC, Hall JE. Textbook of medical physiology. Philadelphia: Saunders; 1986 Sep 20</li><li>• Barrett KE. Ganong's review of medical physiology.</li><li>• Sherman JH, Luciano DS, Vander AJ. Human physiology: the mechanisms of body function. McGraw-Hill; 1985.</li></ul>

## 2. Pharmacognosy I

<b>Course code</b>	<b>PH232</b>
<b>Credit hours</b>	3Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives</b>	<ul style="list-style-type: none"><li>• To introduce the students to world of natural drugs.</li><li>• To enable the student to know the official source, geographical origin, chemical constituents and medicinal value of the official and famous medicinal plants.</li><li>• To make use of the students' knowledge in botany to enable them to describe the microscope and microscopical characters of medicinal plants.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>• General introduction to Pharmacognosy and its history:<ul style="list-style-type: none"><li>i- Definition and scope of Pharmacognosy.</li><li>ii- Role of traditional and herbal systems of medicine and its importance in modern pharmacy.</li></ul></li><li>• Classification of crude drugs.<ul style="list-style-type: none"><li>i- Alphabetical classification.</li><li>ii- Taxonomical classification</li><li>iii- Morphological classification.</li><li>iv- Chemical classification.</li><li>v- Pharmacological classification.</li><li>vi- Chemotaxonomic classification.</li></ul></li><li>• Sources of drugs.<ul style="list-style-type: none"><li>i- Crude drugs used in digestive tract problems.<ul style="list-style-type: none"><li>a- Laxatives.</li><li>b- Anti-diarrhoeal herbs.</li><li>c- Carminative and anti-spasmodic herbs.</li><li>d- Demulcent herbs</li><li>e- Bitter tonic herbs</li><li>f- Anti-ulcer herbs.</li><li>g- Anti-haemorrhoids herbs.</li><li>h- Emetic herbs.</li></ul></li><li>ii- Crude drugs used in respiratory tract problems.<ul style="list-style-type: none"><li>a- Bronchial asthma.</li><li>b- Antitussive herbs.</li></ul></li><li>iii- Crude drugs used in kidney, urinary tract and prostate problems.<ul style="list-style-type: none"><li>a- Diuretic herbs.</li><li>b- Antiseptic herbs.</li><li>c- Anti-infective herbs.</li></ul></li></ul></li></ul>

	<p>d- Prostate enlargement “Prostate hyperplasia”.</p> <p>iv- Crude drugs used in arthritic and skeletal muscle disorder.</p> <ul style="list-style-type: none"> <li>a- Arthritis.</li> <li>b- Muscle pain.</li> <li>c- Gout.</li> </ul> <p>v- Crude drugs used in cardiovascular system problems.</p> <ul style="list-style-type: none"> <li>a- Congestive heart failure.</li> <li>b- Hypertension.</li> <li>c- Arteriosclerosis and hyperlipidaemia.</li> <li>d- Angina.</li> </ul> <p>vi- Crude drugs used in skin and mucous membranes problems.</p> <ul style="list-style-type: none"> <li>a- Dermatitis.</li> <li>b- Contact dermatitis.</li> <li>c- Burns and wounds.</li> <li>d- Lichens and infections of oral cavity and throat.</li> </ul> <p>vii- Crude drugs used in nervous system problems.</p> <ul style="list-style-type: none"> <li>a- Anxiety and sleep disorders.</li> <li>b- Depression.</li> <li>c- Headache.</li> <li>d- Toothache.</li> <li>e- Sexual impotence.</li> <li>f- Parasympatholytic herbs.</li> <li>g- Para-sympathomimetics herbs.</li> <li>h- Narcotic herbs.</li> </ul> <p>viii- Crude drugs used in performance and immune deficiencies.</p> <ul style="list-style-type: none"> <li>a- Performance and endurance enhancers.</li> <li>b- Anticancer herbs.</li> <li>c- Immune system enhancers.</li> </ul> <p>ix- Crude drugs used in metabolic and endocrine system problems.</p> <ul style="list-style-type: none"> <li>a- Gynaecological disorders.</li> <li>b- Antidiabetic herbs.</li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• Introduction to Pharmacognosy, plant taxonomy and herbarium</li> <li>• Introduction to the microscopy and mounting techniques.</li> <li>• Microscopic identification for starches (potato, rice, wheat and maize)</li> <li>• Microscopic identification for calcium oxalate crystals (senna folium + cinchona and cinnamon barks)</li> <li>• Microscopic characters of crude drugs containing volatile oils (Peppermint folium, clove flos, anise fructus and cinnamon barks)</li> <li>• Microscopic identification for Cinchona cortex + chamomile Flores</li> <li>• Microscopic identification for Aniseed +linseed</li> <li>• Microscopic identification for Liquorice + ginger roots</li> </ul>

	<ul style="list-style-type: none"> <li>• Field trip to the Medicinal &amp; Aromatic Plants National Centre.</li> <li>• Field trip to the national botanical gardens</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 10%</li> <li>• Assignment 10%</li> <li>• End semester examination 60%</li> </ul>

## 5. Biochemistry I

<b>Course code</b>	<b>PH235</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives:</b>	<ul style="list-style-type: none"><li>• By the end of this course the students should be able:</li><li>• To understand the cell structure and its functions.</li><li>• To learn and understand the role of amino acids as the building blocks of proteins and the nutritional importance of essential amino acids.</li><li>• To learn the various functions of proteins. Protein structure function relationships (hemoglobin).</li></ul>
	<ul style="list-style-type: none"><li>• To study the enzymes, their catalytic abilities and kinetics (significance of Km values and the effect of inhibitors on Km, drugs as enzyme inhibitors)</li><li>• To understand the importance of vitamins, as enzyme cofactors.</li><li>• Be familiarized with the chemistry of sugars, lipids, and understand their metabolic and medical importance.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>• Introduction to biochemistry</li><li>• The cell structure</li><li>• Amino acids chemistry, ionizations, pKa and pI values, reactions, the peptide bond formation.</li><li>• Protein structure, native and denatured proteins. Structure function relationships. Haemoglobin as a model protein.</li><li>• Enzymes and enzyme kinetics, Km, Vmax, effect of inhibitors, Drugs as enzyme inhibitors. Enzyme activity synthesis regulations, effect of hormones.</li><li>• Carbohydrates chemistry of mono, di, oligo, polysaccharides and heteropolysaccharides glycoproteins and glycosaminoglycans, heparin.</li><li>• Lipid chemistry of fatty acids, triglycerides and phospholipids, steroids, sphingolipids, Lipoproteins, chylomicrons, VLDL, LDL and HDL</li><li>• Nucleic acid (DNA and RNA), components and structure<ul style="list-style-type: none"><li>- DNA organization.</li><li>- RNA types and roles.</li></ul></li><li>• Vitamins: Fat soluble and water soluble vitamins and their metabolic importance, deficiency symptoms, daily requirements, natural sources in food.</li></ul>

<b>Practical</b>	<p><b><u>Experiments of Carbohydrates - Qualitative Tests</u></b></p> <ul style="list-style-type: none"> <li>• Test (1): Molisch Test</li> <li>• Test (2a): Benedict's Test</li> <li>• Test (2b): Fehling's Test</li> <li>• Test (3): Iodine Test</li> <li>• Test (4): Barfoed's Test</li> <li>• Test (5): Bial's Test</li> <li>• Test (6): Seliwanoff's Test</li> <li>• Test (7): Hydrolysis of Disaccharides (Sucrose).</li> <li>• Test (8): Hydrolysis of polysaccharides (Starch).</li> </ul> <p><b><u>Experiments of lipids - Qualitative Tests</u></b></p> <ul style="list-style-type: none"> <li>• Test (1): Solubility Test</li> <li>• Test (2): Sudan III Test</li> <li>• Test (3): Saturation and Unsaturation via addition of iodine Test</li> <li>• Test (4): Saponification of triglycerides Test</li> </ul>
------------------	---

	<ul style="list-style-type: none"> <li>• Test (5): Acrolein Test</li> <li>• Test (6): Phospholipids (lecithin) Test</li> <li>• Test (7): Cholesterol Test by (Two methods:-Liebermann-Burchard test and Salkowski test).</li> </ul> <p><b>Experiments of Amino Acids - Qualitative Tests</b></p> <ul style="list-style-type: none"> <li>• Test (1): Ninhydrin Test</li> <li>• Test (2): Xanthoproteic Acid Test (Aromatic amino acids).</li> <li>• Test (3): Lead sulphide Test (Sulphur amino acids).</li> </ul> <p><b>Experiments of proteins - Qualitative Tests</b></p> <ul style="list-style-type: none"> <li>• Lab (1): Biuret Test</li> <li>• Lab (2): Denature of proteins (Precipitation) Test by</li> <li>• A/ Heat.                    B / Strong acid.                    C/ Heavy metal.    D/ Organic solvent.</li> </ul> <p><b>Experiments of Nucleic Acids - Qualitative Tests</b></p> <ul style="list-style-type: none"> <li>• Lab (1): Hydrolysis of Nucleic Acids Test by (Two methods: Short method test and Long method test).</li> <li>• Test (1): Molisch Test</li> <li>• Test (2): Benedict's Test</li> <li>• Test (3): Bial's Test</li> <li>• Test (4): Ammonium molybdate Test</li> <li>• Test (5): Ammonium silver nitrate Test</li> </ul> <p><b>Experiments of Enzymes - Qualitative Tests</b></p> <ul style="list-style-type: none"> <li>• Lab (1): Effect of Salivary Amylase enzyme activity (Increase no Heat, decrease by Heat or optimum on RT) in Substrate (Starch).</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 20%</li> <li>• Assignment 10%</li> <li>• End semester examination 50%</li> </ul>

## Semester IV

### 1. Physiology II

<b>Course code</b>	<b>PH241</b>
<b>Credit hours</b>	3Cr (3+0)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (42hours)</li></ul>
<b>Objectives:</b>	To provide knowledge and skills concerned with normal functions of different organs, tissues and the body systems.
<b>Course content</b>	<ul style="list-style-type: none"><li>Autonomic nervous system</li><li>Central nervous system</li><li>Endocrine system</li><li>Immune and lymph system</li><li>Musculoskeletal system</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>Mid-semester examination 20%</li><li>Assignment 10%</li><li>End semester examination 70%</li></ul>
<b>References</b>	<ul style="list-style-type: none"><li>Guyton AC, Hall JE. Textbook of medical physiology. Philadelphia: Saunders; 1986 Sep 20</li><li>Barrett KE. Ganong's review of medical physiology.</li><li>Sherman JH, Luciano DS,</li><li>Vander AJ. Human physiology: the mechanisms of body function. McGraw-Hill; 1985.</li></ul>

### 2. Pharmacognosy II

<b>Course code</b>	<b>PH242</b>
<b>Credit hours</b>	3Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (28hours)</li><li>Practical (42 hours)</li></ul>
<b>Objectives</b>	<b>At the end of these courses the student will be able to:</b> <ul style="list-style-type: none"><li>Describe and perform extraction and isolation of drugs from natural sources.</li><li>Use different chromatographic methods for the separation, isolation, purification, and identification of chemical constituents of plant extracts.</li><li>Determine physical and chemical data of pure drugs.</li><li>Apply different spectroscopic techniques for structure elucidation and characterization of different classes of natural products.</li></ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>• <b>Extraction of crude drugs.</b> <ul style="list-style-type: none"> <li>i. Cold extraction methods.           <ul style="list-style-type: none"> <li>a- Maceration.</li> <li>b- Percolation.</li> <li>c- Liquid -liquid extraction.</li> <li>d- Electrical mixer.</li> </ul> </li> <li>ii. Hot extraction methods.           <ul style="list-style-type: none"> <li>e- Digestion.</li> <li>f- Infusion.</li> <li>g- Decoction.</li> <li>h- Continuous soxhlet extraction.</li> </ul> </li> </ul> </li> <li>• <b>Isolation and purification of chemical constituents.</b> <ul style="list-style-type: none"> <li>- Physical methods.</li> <li>- chemical methods.</li> <li>- general principles of chromatography.           <ul style="list-style-type: none"> <li>i. chromatographic methods:               <ul style="list-style-type: none"> <li>a- Adsorption chromatography.</li> <li>b- Partition chromatography.</li> <li>c- Paper chromatography.</li> <li>d- Thin layer chromatography (TLC).</li> <li>e- Preparative TLC.</li> <li>f- Column chromatography.</li> <li>g- Ion exchange chromatography.</li> <li>h- Gel filtration chromatography.</li> <li>i- Gas chromatography.</li> <li>j- HPLC.</li> <li>k- Electrophoresis.</li> </ul> </li> </ul> </li> </ul> </li> </ul>
-----------------------	--

<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Class tests, Seminars and Practical work 20%</li> <li>Mid-semester examination 10%</li> <li>Assignment 10%</li> <li>End semester examination 60%</li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>Basic phytochemical procedures, “extraction methods I” (maceration, infucion and decoction)</li> <li>Basic phytochemical procedures “extraction methods II” (soxhelt)</li> <li>Basic phytochemical procedures “extraction methods III” (volatile oils distillation)</li> <li>Basic phytochemical procedures, Chromatography I (PC)</li> <li>Basic phytochemical procedures, Chromatography I (TLC)</li> <li>Extraction of plant sample with solvents of different polarity and TLC analysis of the extracts</li> <li>Separation of the plant sample by column chromatography and</li> <li>TLC analysis of the fractions</li> <li>Isolation of eugenol from clove buds with distillation and liquid-liquid extraction</li> <li>Purity examination of the isolated eugenol by TLC.</li> <li>Isolation of Eugenol by preparative TLC</li> <li>Characterization and elucidation of eugenol structure using spectroscopic methods</li> </ul>

Wilson and Gisvold, s textbook of organic medicinal and pharmaceutical chemistry, 2004.</li> </ul>

## **5. Analytical chemistry I**

<b>Course code</b>	<b>PH245</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28 hours)</li><li>• Practical and tutorials (42 hours)</li></ul>
<b>Objective</b>	<ul style="list-style-type: none"><li>• To equip the students with both theoretical and practical experience that</li><li>• would enable him/her to carry out the analysis, and how to handle the basic laboratory equipment and glassware and the proper way for</li></ul>

	calculation and data analysis to be more efficient and competent in the area of pharmaceutical analysis.
<b>Course content:</b>	<p><b>Quantitative analysis:</b></p> <p><b>The theoretical basis of quantitative titrimetric analysis</b></p> <ul style="list-style-type: none"> <li>• Aqueous acid-base titration,</li> <li>• Non-aqueous titration,</li> <li>• Precipitation titration,</li> <li>• Gravimetric analysis,</li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• <b>Classification of quantitative analysis:</b> <ul style="list-style-type: none"> <li>- Treatment of quantitative data,</li> <li>- Common apparatus for quantitative analysis</li> </ul> </li> <li>• <b>Quantitative titrimetric analysis</b> <ul style="list-style-type: none"> <li>- Preparation of Standard solution</li> <li>- Direct Titration</li> <li>- Back Titration</li> <li>- Back Titration with Blank Determination</li> <li>- Non-aqueous Acid/Base titration</li> <li>- Precipitation Titration</li> <li>- Gravimetry</li> </ul> </li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 60%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• Watson DG. Pharmaceutical analysis E-book: a textbook for pharmacy students and pharmaceutical chemists. Elsevier Health Sciences; 2020 Jun 10.</li> <li>• Vogel AI, Jeffery GH. Vogel's textbook of quantitative chemical analysis. Wiley; 1989.</li> <li>• Kar A. Pharmaceutical drug analysis. New Age International; 2005.</li> </ul>

## **6. Biochemistry II**

<b>Course code</b>	<b>PH246</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>• Lectures (28hours)</li> <li>• Practical (42 hours)</li> </ul>
<b>Objectives</b>	<p><b>By the end of this course the students should be able to:</b></p> <ul style="list-style-type: none"> <li>• Understand the body various energy transformations</li> <li>• Understand the molecular nature of metabolic disorders leading to glycogen storage diseases, fructosemias, galactosemias, diabetes mellitus, ketacidosis, lipid storage diseases, gangilliosidoses and atherosclerosis.</li> <li>• know how the body catabolizes amino acids and the associated disorders such as parkinsonism and albinism.</li> </ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>Metabolism of carbohydrates, aerobic and anaerobic glycolysis, TCA cycle, substrate level phosphorylation, the electron transport chain and oxidative phosphorylation, regulation of glucose catabolism. Fructose and galactose catabolism, fructosemias and galactosemias. The various pathways of glucose utilizations.</li> <li>Metabolism of lipids, the <math>\beta</math>-oxidation of fatty acids, the energy gains</li> <li>Metabolism of proteins, the catabolism of amino acids, the urea cycle, the fate of the carbon skeletons, glucogenic and ketogenic amino acids. Production of specialized biomolecules, epinephrine, melanin, here etc</li> <li>The role of hormones, insulin, glucagon, epinephrine and glucocorticoids on the integration of metabolism.</li> <li>The molecular explanations of the metabolic disorders, glycogen storage diseases, diabetes mellitus, ketoacidosis, lipid storages, hyperlipidaemias, parkinsonism, PKU, sickle cell anaemia, thalassemia etc. the therapeutic approach to deal with these disorders. Body fluids (blood, urine, CSF, seminal fluid etc.) abnormal constituents as diagnostic markers for disease processes.</li> <li>Kidney functions tests, Liver function tests, muscle and heart function tests.</li> <li>Diagnostic biochemical tests using CSF.</li> <li>Hormones, the endocrine glands, their chemical nature, role in regulation of body homeostasis and metabolism, hormonal receptors.</li> </ul>
<b>Practical</b>	<p>(Nutrition and Metabolism Quantitative Tests)</p> <ul style="list-style-type: none"> <li>Bio-safety (Methods of Sterilization).</li> <li>How to collection samples (Body fluids) and equipment.</li> </ul> <p><u>Urine Tests</u></p> <ul style="list-style-type: none"> <li>Urinalysis by (Dipstick" method).</li> <li>Physical and Chemical properties for (Normal and Abnormal cases).</li> </ul>

	<p><u><b>Bloods Tests</b></u></p> <p><u><b>Carbohydrates catabolism</b></u></p> <ul style="list-style-type: none"> <li>• Glucose Tolerance Test (GTT by GO / PAP enzymatic kit method).</li> <li>• Types of curves (normal and abnormal curves: Diabetic, Lag and flat).</li> </ul> <p><u><b>Renal Function Tests (RFT)</b></u></p> <ul style="list-style-type: none"> <li>• Estimation of Serum Uric acid by (uricase test by enzymatic kit method).</li> <li>• Estimation of Serum Creatinine by (Jaffe by kit method).</li> <li>• Estimation of Serum Urea by (urease test by enzymatic kit method).</li> </ul> <p><u><b>Liver Function Tests (LFT)</b></u></p> <p><u><b>Lipids profile</b></u></p> <ul style="list-style-type: none"> <li>• Estimation of serum total cholesterol by (Estrase/CHOD/ PAP by enzymatic kit method).</li> <li>• Estimation of serum triglyceride. (Lipase/GPO/PAP by enzymatic kit method).</li> <li>• Estimation of serum high density lipoprotein (HDL by enzymatic kit method).</li> <li>• Estimation of serum low density lipoprotein (LDL by enzymatic kit method).</li> </ul> <p><u><b>Proteins and amino acids catabolism</b></u></p> <ul style="list-style-type: none"> <li>• Estimation of Serum Total protein (Biuret by enzymatic kit method).</li> <li>• Estimation of Serum Albumin. (Bromo-cresol green (BCG) at pH 4.1 kit method).</li> <li>• Estimation of Serum Alanine Aminotransferase (ALT by enzymatic kit method).</li> <li>• Estimation of Serum Aspartate Aminotransferase (AST by enzymatic kit method).</li> <li>• Estimation of Serum Total Bilirubin (BILT2 by enzymatic kit method).</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Assignment 10%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 50%</li> </ul>

# Third Year

## Semester V

### 1. Phytochemistry I

<b>Course code</b>	<b>PH351</b>
<b>Credit hours</b>	3Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives</b>	<b>At the end of these courses the student will be able to:</b> <ul style="list-style-type: none"><li>• Describe and perform extraction and isolation of drugs from natural sources.</li><li>• Determine physical and chemical data of pure drugs.</li><li>• Apply different spectroscopic techniques for structure elucidation and characterization of different classes of natural products.</li><li>• Know the origin, chemistry and medicinal use of some drugs.</li></ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>• Carbohydrates containing drugs.</li> <li>• Lipids containing drugs <ul style="list-style-type: none"> <li>i. Fixed oils. <ul style="list-style-type: none"> <li>a- Saturated fixed oils (coconut oil, palm oil).</li> <li>b- Monounsaturated fixed oils (olive oil, castor oil, peanut oil).</li> <li>c- Polyunsaturated fixed oils (cotton seed oil, almond oil, sesame oil, corn oil, cod liver oil).</li> </ul> </li> <li>ii. Fats. <ul style="list-style-type: none"> <li>a- Theobroma oil.</li> <li>b- Lanolin.</li> </ul> </li> <li>iii. Waxes. <ul style="list-style-type: none"> <li>a- Bees wax.</li> <li>b- Carnuba wax.</li> <li>c- Spermaceti.</li> </ul> </li> </ul> </li> <li>• Enzymes and proteins drugs. <ul style="list-style-type: none"> <li>i. Pancreatin.</li> <li>ii. Diastase.</li> <li>iii. Pepsin.</li> <li>iv. Papain.</li> <li>v. Heparin.</li> <li>vi. Streptokinase.</li> <li>vii. Gelatin.</li> </ul> </li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• General identification tests of simple sugars</li> <li>• Quantitative analysis of simple sugars.</li> <li>• Tests for <i>Gossypii lana</i> "Cotton"</li> <li>• Extraction of pectin from orange peels</li> <li>• Isolation of polysaccharide from <i>Lini semen</i></li> <li>• Hydrolysis of polysaccharides &amp; TLC analysis of the mono-Saccharides.</li> <li>• Alginates &amp; agar tests for identity &amp; determination of agar swelling value</li> <li>• <i>Acaciae gummi</i> and <i>Tragacantha</i> Tests for identification and purity</li> <li>• Drugs with fixed oil content I</li> <li>• Drugs with fixed oil content II</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 20%</li> <li>• Assignment 10%</li> <li>• End semester examination 50%</li> </ul>

## **2. Pharmaceutics IV**

Course Code	PH352
Credit Hours	4 Cr (3+1)
Contact Hours	<ul style="list-style-type: none"> <li>• Lectures (42 hours)</li> <li>• Practical and tutorial ( 42hours)</li> </ul>
Objectives	<p>At the end of the course student will be able to:</p> <ul style="list-style-type: none"> <li>• Define a solution and describe all types of solution</li> <li>• Determine solution route of administration</li> <li>• Define the additives in solution preparation and explain its uses</li> <li>• Understand the different vehicles used in pharmaceutical solution and its medicinal indications</li> <li>• Define the suspension and its different types</li> <li>• Explain the difference between flocculated and deflocculated system</li> <li>• Understand the stability of the suspension</li> <li>• Define the emulsion and the choice of emulsion type</li> <li>• Understand the emulsion consistency</li> <li>• Explain the choice of emulsifying agent</li> <li>• Understand stability testing of the emulsion</li> </ul>
Course Content	<ul style="list-style-type: none"> <li>• Introduction to liquid dosage form</li> <li>• Definition of the solution</li> <li>• Type of vehicles used in solution</li> </ul>

	<ul style="list-style-type: none"> <li>• Solution route of administration</li> <li>• Solution stability</li> <li>• Enhancement of drug solubility</li> <li>• Definition of suspension formulation and excipient</li> <li>• Stability of the suspension</li> <li>• Development of emulsion</li> <li>• Emulsion pharmaceutical uses</li> <li>• Different emulsifying agent</li> <li>• Nano-emulsion</li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• Syrups</li> <li>• Aromatic water and spirit</li> <li>• Elixirs, tincture, and linctus</li> <li>• Suspension</li> <li>• w/o and o/w Emulsion</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 60%</li> </ul>
<b>Reference</b>	<ul style="list-style-type: none"> <li>• Winfield AJ, Rees J, Smith I, editors. Pharmaceutical Practice E-Book. ### 3. Organic chemistry IV

<b>Course code</b>	<b>PH353</b>
<b>Credit hours</b>	3Cr.(2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>• Lectures (28 hours)</li> <li>• Practical and tutorials (42 hours)</li> </ul>
<b>Objective</b>	<p>At the end of this course the student should be able to:</p> <ul style="list-style-type: none"> <li>• Understand different types of functional groups</li> <li>• Writing Equations for Organic Reactions</li> <li>• Describe Kinds of Organic Reactions</li> <li>• Understand reactions Kinetics</li> <li>• Understand Catalysis</li> </ul>

<b>Course content</b>	<b>1. Aromaticity</b> <ul style="list-style-type: none"><li>• The Structure of Benzene and Nomenclature of Benzene Derivatives</li><li>• Benzene's Unusual Stability</li><li>• The Criteria for Aromaticity—Hückel's Rule</li><li>• What Is the Basis of Hückel's Rule?</li><li>• Electrophilic Aromatic Substitution</li><li>• Halogenation, Nitration and Sulfonation</li><li>• Friedel-Crafts Alkylation and Friedel-Crafts Acylation</li><li>• Substituted Benzenes</li><li>• Electrophilic Aromatic Substitution of Substituted Benzenes</li><li>• Why Substituents Activate or Deactivate Benzene ring</li><li>• Limitations on electrophilic substitution reactions with substituted</li></ul>
-----------------------	---

	<ul style="list-style-type: none"> <li>benzene</li> <li>• Synthesis of Benzene Derivatives</li> <li>• Halogenation of Alkyl Benzenes</li> <li>• Oxidation and Reduction of Substituted Benzenes</li> <li>• Multistep Synthesis</li> </ul>
	<p><b>2. Aldehydes and ketones</b></p> <ul style="list-style-type: none"> <li>• Nomenclature and Physical Properties</li> <li>• Preparation of Aldehydes and Ketones</li> <li>• Reactions of Aldehydes and Ketones</li> <li>• Nucleophilic Addition of H- and R-</li> <li>• Nucleophilic Addition of <math>\text{—CN}</math></li> <li>• Addition of <math>\text{H}_2\text{O}</math>—Hydration</li> <li>• Addition of Alcohols—Acetal Formation</li> <li>• Acetals as Protecting Groups and Cyclic Hemiacetals</li> </ul>
	<p><b>3. Carboxylic acids and Derivatives</b></p> <ul style="list-style-type: none"> <li>• Nomenclature and Physical Properties</li> <li>• Carboxylic Acids and the Acidity of the O—H Bond</li> <li>• Preparation of Carboxylic Acids</li> <li>• Reactions of Carboxylic Acids</li> <li>• Inductive Effects in Aliphatic Carboxylic Acids</li> <li>• Substituted Benzoic Acids</li> <li>• Sulfonic Acids</li> <li>• Reduction of Carboxylic Acids and Their Derivatives</li> <li>• Reaction of Organometallic Reagents with Carboxylic</li> <li>• Acid Derivatives</li> <li>• Nucleophilic Acyl Substitution</li> <li>• Esters and Amides</li> <li>• Acid Chlorides</li> <li>• Anhydrides</li> <li>• Nitriles</li> </ul>
<b>Practical</b>	<ul style="list-style-type: none"> <li>• Functional group reactions</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and Practical work 20%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 60%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• McMurry JE. Fundamentals of organic chemistry. Cengage Learning; 2010.</li> <li>• Gorzynski JS. Organic chemistry. # Fourth year

## Semester VII

### 1. Phytochemistry III

<b>Course code</b>	<b>PH471</b>
<b>Credit hours</b>	3Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives</b>	At the end of these courses the student will be able to: <ul style="list-style-type: none"><li>• Describe and perform extraction and isolation of drugs from natural source.</li><li>• Determine physical and chemical data of pure drugs.</li><li>• Use different chromatographic methods for the separation, isolation, purification, and identification of chemical constituents of plant extracts.</li><li>• Apply different spectroscopic techniques for structure elucidation and characterization of different classes of natural products.</li><li>• Know the origin, chemistry and medicinal use of some drugs.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>- Volatile oils and terpenoids</li><li>• Classification of chemical constituents of volatile oils.</li><li>• methods of obtaining volatile oils.</li><li>• chemical tests for volatile oils.</li><li>• examples of volatile oils containing drugs.</li><li>• general properties of terpenoids.</li><li>• Classification of terpenoids.</li><li>- Resins &amp; resin combinations.</li><li>• Resins.</li><li>• Oleo-resins.</li><li>• Gum- resins.</li><li>• Oleo-Gum resins.</li><li>• Balsams.</li><li>- Bitter principles.</li></ul>
<b>Practical</b>	<ul style="list-style-type: none"><li>• Analysis of drugs with volatile oil content, I</li><li>• Analysis of drugs with volatile oil content, II</li><li>• Analysis of drugs with volatile oil content, III</li><li>• Phytochemical analysis of monoterpenes</li><li>• Analysis of Sesquiterpenes &amp; Proazulenes</li><li>• Drugs with miscellaneous terpene content</li><li>• Drugs with triterpene saponin content</li><li>• Identification test of Resins</li><li>• Extraction of ginger oleoresin &amp; Isolation of gingerols and shogaols</li></ul>

<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Class tests, Seminars and Practical work 20%</li> <li>Mid-semester examination 20%</li> <li>End semester examination 50%</li> </ul>

## **6. Pharmaceutical Microbiology II**

<b>Course code</b>	<b>PH476</b>
<b>Credit hours</b>	3 Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>Lectures (28 hours)</li> <li>Practical and tutorials (42 hours)</li> </ul>

<b>Objectives</b>	<p>At the end of this course the student will:</p> <ul style="list-style-type: none"> <li>Understand the basic principles of mycology, virology &amp; parasitology.</li> <li>Have good knowledge on the pathogenesis of fungal, viral and parasitic infections.</li> <li>Acquire basic information on Rickettsia, Chlamydia and Mycoplasmas.</li> </ul>
<b>Course content</b>	<p>1. Mycology</p> <p>1.1. The fungi, moulds and yeasts Structure, Growth.</p> <p>1.2. Reproduction and classification of fungi of pharmaceutical importance.</p> <p>2. Rickettsiae, chlamydiae and mycoplasmas.</p> <p>2.1. General, Characteristics, Cultivation, Laboratory diagnosis &amp; important, typical rickettsiae, chlamydiae and mycoplasmas.</p> <p>3. Virology: Introduction, Classification, Characteristics, Cultivation, &amp; Bacteriophages</p> <p>Interference with viral multiplication and infectivity.</p> <p>Interferons, Important viruses, Chemical inhibition of viral multiplication.</p> <p>4. Parasitology: General introduction, Classification, Important typical protozoa.</p>
<b>Practical</b>	<p><b>1.</b> Identification of fungi</p> <p><b>2.</b> Laboratory methods in medical parasitology</p> <ul style="list-style-type: none"> <li>Faecal specimen collection and fixation</li> <li>Examination of faecal specimen (Microscope and stain)</li> <li>Urine examination (<i>Schistosoma haematobium</i>)</li> <li>Blood examination using Giemsa stain (Malaria)</li> </ul> <p><b>3.</b> Intestinal protozoa</p> <ul style="list-style-type: none"> <li><i>Amebae</i></li> <li>Intestinal flagellates (<i>Giardia lamblia</i>)</li> </ul> <p><b>4.</b> Blood and tissue protozoa</p> <ul style="list-style-type: none"> <li><i>Plasmodium &amp; Leishmania</i> species</li> </ul> <p><b>5.</b> Helminths</p> <ul style="list-style-type: none"> <li><i>Trematodes</i> (Flukes)</li> <li><i>Cestodes</i> (Tapeworms)</li> </ul> <p><b>6.</b> Arthropods</p> <ul style="list-style-type: none"> <li><i>Class Insecta</i></li> <li><i>Class Arachnida</i></li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Assignment, Seminar, Attendance, Practical Exam. 20%</li> <li>Mid Exam 20%</li> <li>Final Exam 60%</li> </ul>

## **Semester VIII**

### **1. Phytochemistry IV**

<b>Course code</b>	<b>PH481</b>
<b>Credit hours</b>	3Cr. (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li><li>• Practical (42 hours)</li></ul>
<b>Objectives</b>	<p>At the end of these courses the students will gain more knowledge on:</p> <ul style="list-style-type: none"><li>• Understand raw material as source of herbal drugs from cultivation to herbal drug product.</li><li>• Know the WHO and ICH guidelines for evaluation of herbal drugs</li><li>• Know the herbal cosmetics, natural sweeteners, nutraceuticals</li><li>• Appreciate patenting of herbal drugs, GMP.</li><li>• The origin, chemistry, and medicinal value active principles belonging to different phytochemical groups.</li></ul>
<b>Course content</b>	<p><b>1- Herbs as raw materials (5 hrs)</b></p> <ul style="list-style-type: none"><li>• Definition of herb, herbal medicine, herbal medicinal products, herbal drug preparation.</li><li>• Source of Herbs.</li><li>• Selection, identification and authentication of herbal materials.</li><li>• Processing of herbal raw material.</li><li>• Biodynamic Agriculture</li><li>• Good agricultural practices in cultivation of medicinal plants including Organic farming.</li><li>• Pest and Pest management in medicinal plants: Biopesticides/Bioinsecticides.</li></ul> <p><b>2- Nutraceuticals (9hrs)</b></p> <ul style="list-style-type: none"><li>• General aspects, Market, growth, scope and types of products available in the market.</li><li>• Health benefits and role of Nutraceuticals in ailments like Diabetes, CVS diseases, Cancer, Irritable bowel syndrome and various Gastro intestinal diseases.</li><li>• Study of following herbs as health food: Alfaalfa, Chicory, Ginger, Fenugreek, Garlic, Honey, Amla, Ginseng, Ashwagandha, Spirulina.</li><li>• Herbal-Drug and Herb-Food Interactions: General introduction to interaction and classification.</li><li>• Study of following drugs and their possible side effects and interactions: Hypercium, kava-kava, Ginkobiloba, Ginseng, Garlic, Pepper &amp; Ephedra.</li></ul>

<p><b>3- Herbal Cosmetics (5 hrs)</b></p> <ul style="list-style-type: none"> <li>• Sources and description of raw materials of herbal origin used via, fixed oils, waxes, gums colours, perfumes, protective agents, bleaching agents, antioxidants in products such as skin care, hair care and oral hygiene products.</li> <li>• Herbal Excipients – Significance of substances of natural origin as excipients –colorants, sweeteners, binders, diluents, viscosity builders, disintegrants, flavours &amp; perfumes.</li> <li>• Herbal formulations: Conventional herbal formulations like syrups, mixtures and tablets and Novel dosage forms like phytosomes.</li> </ul> <p><b>4- Evaluation of Drugs (5hrs)</b></p> <ul style="list-style-type: none"> <li>• WHO &amp; ICH guidelines for the assessment of herbal drugs.</li> <li>• Stability testing of herbal drugs.</li> <li>• Patenting and Regulatory requirements of natural products: <ul style="list-style-type: none"> <li>a) Definition of the terms: Patent, IPR, Farmers right, Breeder's right, Bioprospecting and Biopiracy</li> <li>b) Patenting aspects of Traditional Knowledge and Natural Products. Case study of Curcuma &amp; Neem.</li> </ul> </li> <li>• Regulatory Issues - Regulations in India (ASU DTAB, ASU DCC), Regulation of manufacture of ASU drugs - Schedule Z of Drugs &amp; Cosmetics Act for ASU drugs.</li> </ul> <p><b>5- Herbal Industry (6 hrs)</b></p> <ul style="list-style-type: none"> <li>• Herbal drugs industry: Present scope and future prospects.</li> <li>• A brief account of plant based industries and institutions involved in work on medicinal and aromatic plants globally.</li> <li>• Schedule T – Good Manufacturing Practice of Indian systems of medicine.</li> <li>• Components of GMP (Schedule – T) and its objectives.</li> <li>• Infrastructural requirements, working space, storage area, machinery and equipment, standard operating procedures, health and hygiene, documentation and records.</li> </ul>	
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Assignment 10%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 70%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• O'Neill MJ. Trease and Evans' pharmacognosy. The Lancet. 1996 Dec 14;348(9042):1645.</li> <li>• Robbers JE, Speedie MK, Tyler VE. ## 2. Pharmaceutics VII

<b>Course code</b>	<b>PH482</b>
<b>Credit hours</b>	2Cr (2+0)
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>• Lectures (28 hours)</li> </ul>
<b>Overall objective</b>	At the end of this course the student should be able to: <ul style="list-style-type: none"> <li>• Demonstrate an understanding and assess factors which affect the absorption, distribution, metabolism and excretion of drugs</li> <li>• To define various terms relating to bioavailability studies</li> <li>• To evaluate components and results of a bioavailability</li> </ul>
<b>Course content</b>	<ol style="list-style-type: none"> <li><b>1. Introduction of biopharmaceutics</b></li> <li><b>2. Dosage form factors influencing bioavailability</b> <ul style="list-style-type: none"> <li>• Drug absorption</li> <li>• Factors influencing absorption</li> <li>• Physicochemical factors affecting absorption</li> <li>• Drug Distribution</li> <li>• Drug Metabolism</li> <li>• Drug Excretion</li> </ul> </li> <li><b>3. Bioavailability and bioequivalence</b></li> <li><b>4. Methods to assess bioavailability</b></li> </ol>

<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Class tests, Seminars and Practical work 20%</li> <li>Mid-semester examination 20%</li> <li>End semester examination 60%</li> </ul>
<b>Reference</b>	<ul style="list-style-type: none"> <li>Lachman L, Lieberman HA, Kanig JL. The theory and practice of industrial pharmacy. Philadelphia: Lea &amp; Febiger; 1976.</li> <li>Shargel L, Yu AB. Applied Biopharmaceutics &amp; Pharmacokinetics 7<sup>th</sup> edition.</li> </ul>

### 3. Medicinal chemistry II

<b>Course code</b>	<b>PH483</b>
<b>Credit hours</b>	<b>3Cr (3+0)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>Lectures (42hours)</li> </ul>
<b>Objective</b>	<p>At the end of this course the student should be able to:</p> <ul style="list-style-type: none"> <li>Understand the structure activity relationship of various drugs and describe their main functional groups &amp; their interactions with biological systems.</li> </ul>

<b>Course content</b>	<ol style="list-style-type: none"> <li><b>1. Drug acting on Autonomic nervous system:</b> <ul style="list-style-type: none"> <li>• Cholinergic Agonists</li> <li>• Cholinergic Receptor Antagonists</li> <li>• Cholinergic Blocking Agents</li> <li>• Parasympathetic Postganglionic</li> <li>• Solanaceous Alkaloids and Analogs</li> <li>• Ganglionic Blocking Agents</li> <li>• Neuromuscular Blocking Agents</li> <li>• Drugs Affecting Adrenergic Neurotransmission</li> <li>• Sympathomimetic Agents</li> <li>• Adrenergic Receptor Antagonists (Blockers)</li> </ul> </li> <li><b>2. Drug acting on Cardiovascular system:</b> <ul style="list-style-type: none"> <li>• Antianginal Agents and Vasodilators.</li> <li>• Antiarrhythmic drugs</li> <li>• Antihypertensive agents</li> <li>• Anti-hyperlipidaemia agents</li> <li>• Anticoagulants</li> </ul> </li> <li><b>3. Diuretics</b></li> <li><b>4. Antihistamines</b> <ul style="list-style-type: none"> <li>• Inhibition of Histamine Release: Mast Cell Stabilizers</li> <li>• Histamine H1 &amp; H2-Antagonists</li> <li>• Histamine H3- and H4-Receptors</li> </ul> </li> <li><b>5. Blood pharmacology:</b> <ul style="list-style-type: none"> <li>• drug used to manage anaemia</li> <li>• anticoagulants, antiplatelets,</li> <li>• fibrinolytic and antifibrolytic drugs.</li> <li>• Management of hyperlipidaemia.</li> </ul> </li> </ol>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests, Seminars and tutorials 20%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 60%</li> </ul>

## 7. Pharmacy practice II

<b>Course code</b>	<b>PH487</b>
<b>Credit hours</b>	3 Cr. (2+1)
<b>Contact hours</b>	Lectures (28hours) Practical/ Tutorial (42 hours)
<b>Objectives</b>	<p>At the end of this course students should be able to:</p> <ul style="list-style-type: none"> <li>Familiarize with the Sudanese pharmacy law.</li> <li>Define and explain laws governing control of narcotics and psychotropic drugs.</li> <li>Identify and define drug abuse.</li> <li>Acquire skills and knowledge on how to prevent and control drug abuse.</li> </ul>
<b>Course content</b>	<ul style="list-style-type: none"> <li>Definitions:</li> <li>Law constitution, Statute and act, Ordinance, Curts and felony, Treaty and convention.</li> <li>Sudanese Pharmacy and Poisons Act (the most recent) Control of Narcotic Drugs.</li> <li>The Convention on psychotropic substances (Vienna convention1971).</li> <li>The drugs and prevention of illicit traffic in Drugs (Its aims).</li> <li>Definition and classification of the major psychoactive substances.</li> <li>Tobacco and alcohol - effects/common complications.</li> <li>The Pharmacist and control of psychoactive substances.</li> <li>Preventive education against substance abuse.</li> <li>Opiates, cocaine and cannabis.</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>Class tests and year work (Tutorials &amp; Assignments) 20 marks</li> <li>End semester examination, one three hours paper 80 marks</li> </ul>

<b>References</b>	<ul style="list-style-type: none"> <li>Alfadl AA, Ali GK, Yousif MA, Babekir MF. Pharmacy practice in Sudan. In Pharmacy Practice in Developing Countries 2016 Jan 1 (pp. 319-341). Academic Press.</li> <li>Kokane CK, Gokhale SB. Textbook of Forensic Pharmacy. 5th Ed. Edward Arnold; 1959.</li> <li>Control of Narcotics Substances Act; 1997.</li> </ul>

## **8.Computer skills:**

<b>Course code</b>	<b>PH488</b>
<b>Credit hours</b>	<ul style="list-style-type: none"> <li>1Cr. (1+0)</li> </ul>
<b>Contact hours</b>	<ul style="list-style-type: none"> <li>Lectures (14 hours)</li> </ul>
<b>Objective</b>	<p>Upon completion of this course students should be able to gain more knowledge on:</p> <ul style="list-style-type: none"> <li>Understand the concept, development, applications, types, and components of computer systems.</li> <li>Discuss the representation and processing digital computers.</li> <li>Learn the basics of computer programming</li> </ul>
<b>Course content</b>	<ol style="list-style-type: none"> <li>1. The computer concept.</li> <li>2. The history of computer.</li> <li>3. Overview of computer in human life (i.e. the effect of computer in human life), computer in (business, education, industry, medicine, entertainment and sport, home, communication, research and scientific fields).</li> <li>4. Overview for the components of the computer systems: <ol style="list-style-type: none"> <li>a) Hardware (input devices, output devices, memories, storage media, central processing unit , buses and etc.)</li> <li>b) Software <ul style="list-style-type: none"> <li>system software, application software</li> <li>Microsoft office (Word, PowerPoint, Excel).</li> <li>Opteron system windows.</li> <li>Network</li> <li>Security and safety.</li> </ul> </li> </ol> </li> <li>5. An Overview of computers (digital computers, analogue computers, hybrid computers, super computers, mainframe computers, minicomputers, personal computers, multi-user computers, etc.)</li> </ol>

	<p>6. Information representation in digital computers (characters, numeric information, machine instructions, images, etc.)</p> <p>7. Introductions to computer programming</p> <ul style="list-style-type: none"> <li>• Review for development of programming language</li> <li>• .Review of programming methods.</li> <li>• Simple discussion for algorithm concept, variable and control structure)</li> </ul> <p>8. Definition and benefits of computer network and internet</p>

## **Fifth Year** **Semester IX**

### **1. Phytochemistry V**

<b>Course code</b>	<b>PH591</b>
<b>Credit hours</b>	2Cr. (2+0)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28hours)</li></ul>
<b>Objective</b>	Upon completion of this course students should be able to gain more knowledge on: <ul style="list-style-type: none"><li>• The different biogenetic pathways leading to important secondary metabolites.</li><li>• The origin and biogenetic pathways of some important antibiotics.</li><li>• The role of the different civilizations in the development of herbal medicine.</li><li>• Understand all the steps to be followed to obtain herbal drugs of good quality.</li><li>• Understand basic principles of herbal medicine and proposed mechanisms of action.</li><li>• Explain how herbal drugs can be used clinically for different indication.</li><li>• Acquire a greater knowledge of plant-based products as the alternative to other therapies.</li><li>• Discuss several clinical studies on herbal medicine and their strengths and deficits.</li></ul>
<b>Course content</b>	<ol style="list-style-type: none"><li>1. Biogenesis of secondary metabolites<ul style="list-style-type: none"><li>• Methods of investigation in biogenic studies.</li><li>• interrelationships of biosynthetic pathways leading to secondary constituents in plants</li><li>• aromatic biosynthesis:</li><li>• the shikimic acid pathway.</li><li>• The acetate pathway.</li><li>• Biosynthesis of some glycosides:<ul style="list-style-type: none"><li>a- biosynthesis of anthraquinone glycosides.</li><li>b- Biosynthesis of cyanogenic glycosides.</li><li>c- Biogenesis of flavanoids glycosides.</li></ul></li><li>• Biogenesis of phenolic compounds.</li><li>• Biogenesis of terpenoids.</li><li>• Biogenesis of some alkaloids:<ul style="list-style-type: none"><li>a- Tropane alkaloids.</li></ul></li></ul></li></ol>

	<p>b- Isoquinoline alkaloids.</p> <p>c- Indole alkaloids.</p> <p>2. Antibiotics</p> <ul style="list-style-type: none"> <li>• Antibiotics screening.</li> <li>• Antibiotic commercial production.</li> <li>• Antibiotics recovery and isolation.</li> <li>• Biological and biochemical classification of antibiotics</li> </ul> <p>3. Examples of biosynthesis of some antibiotics.</p> <ul style="list-style-type: none"> <li>• Penicillins and cephalosporins.</li> <li>• Chloramphenicol.</li> <li>• Cephamycins</li> <li>• Polypeptide antibiotics.</li> <li>• Tetracyclines.</li> <li>• Macrolides antibiotics.</li> <li>• Polyenes.</li> <li>• Griseofulvin.</li> <li>• Streptomycin.</li> <li>• Neomycin and paromomycin.</li> <li>• Kanamycin.</li> <li>• Gentamycin.</li> <li>• Tobramycin.</li> </ul> <p>4. Allergens and allergenic reactions.</p>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Assignment 10%</li> <li>• Mid-semester examination 20%</li> <li>• End semester examination 70%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• O'Neill MJ. Trease and Evans' pharmacognosy. The Lancet. 1996 Dec 14;348(9042):1645.</li> <li>• Robbers JE, Speedie MK, Tyler VE. ## **7. Research Methodology**

<b>Course code</b>	<b>PH597</b>
<b>Credit hours</b>	<b>2Cr (2+0)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28 hours)</li></ul>
<b>Objectives:</b>	At the end of this course the students should be able to; <ul style="list-style-type: none"><li>• Describe the various research methods used in pharmacy</li><li>• Conduct research in the pharmacy field</li></ul>
<b>Course content:</b>	Research: <ul style="list-style-type: none"><li>• kinds of research</li><li>• research methodology</li><li>• relationship between research and theory</li><li>• research design</li></ul>

## **8. Biostatistics**

<b>Course code</b>	<b>PH598</b>
<b>Credit hours</b>	<b>2 Cr (2+0)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28 hours)</li></ul>
<b>Objectives</b>	<ul style="list-style-type: none"><li>• To get knowledge about the word processing and data analysis.</li><li>• The course aims to introduce the student to the concept and applications of statistical methods as applicable to the biological sciences.</li><li>• It deals with the principles and concepts of biostatistics as well as method of analysis and evaluation of biological data.</li><li>• The course includes qualitative and quantitative data presentation, sampling variability and significance, special emphasis is laid on the use of these methods in the decision making process.</li><li>• Real life example from areas such as quality control biological testing and assay.</li><li>• Clinical studies and pharmaceutical drug development are extensively covered.</li></ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>• Data collection, sampling techniques, summarization of data, population &amp; samples, probability statement, tests of hypothesis &amp; significance, small sample test, simple linear correlation &amp; regression, non-parametric tests, introduction to SPSS for windows, data transformation; selecting; weighting &amp; ordering cases, data analysis with SPSS for windows, using the SPSS chart facility.</li> <li>• Introduction: to know the operating system of the computer, the word processing and the database.</li> <li>• Presentation of the data and determination of the variables.</li> <li>• Calculations of the units of the normal distribution.</li> <li>• To deal with the bases of the normal distribution.</li> <li>• To perform hypothesis testing and variable comparison. To deal with the bases of probability, to deal with simple regression and correlation.</li> <li>• To deal with questionnaire...etc.</li> </ul>
<b>Evaluation:</b>	<ul style="list-style-type: none"> <li>• Class tests and year work (Tutorials and Assignments) 20%</li> <li>• End semester examination, one three hours paper 80%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• Milton JS, McTeer PM, Corbet JJ. Introduction to statistics.</li> <li>• Brase CH, Brase CP. Understandable statistics. Cengage Learning; 2014.</li> </ul>

## Semester X

### **1. Phytotherapy**

<b>Course code</b>	<b>PH5101</b>
<b>Credit hours</b>	<b>2Cr. (2+0)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (28hours)</li></ul>
<b>Objectives</b>	<p>Upon completion of this course students should be able to gain more knowledge on:</p> <ul style="list-style-type: none"><li>The different biogenetic pathways leading to important secondary metabolites.</li><li>The origin and biogenetic pathways of some important antibiotics.</li><li>The role of the different civilizations in the development of herbal medicine.</li><li>Understand all the steps to be followed to obtain herbal drugs of good quality.</li><li>Understand basic principles of herbal medicine and proposed mechanisms of action.</li><li>Explain how herbal drugs can be used clinically for different indication.</li><li>Acquire a greater knowledge of plant-based products as the alternative to other therapies.</li><li>Discuss several clinical studies on herbal medicine and their strengths and deficits.</li></ul>
<b>Course content</b>	<ol style="list-style-type: none"><li>1. Introduction and definitions.<ul style="list-style-type: none"><li>• Types of drugs derived from plants.</li><li>• Reasons why people use herbs.</li><li>• Advantages of phytomedicines.</li><li>• iv- Risks of using phytomedicines.</li></ul></li><li>2. Medicinal plants through history.<ul style="list-style-type: none"><li>• Ancient Egyptian medicine.</li><li>• Ancient Greek medicine.</li><li>• Ancient Roman medicine.</li><li>• Traditional Chinese medicine.</li><li>• Indian ancient medicine.</li><li>• Islamic medicine.</li></ul></li><li>3. Cultivation, collection, and processing medicinal plants.</li><li>4. Standards applicable herbal drugs.</li><li>5. Assay of crude drugs.</li><li>6. Herbal preparations.</li></ol>

	<ul style="list-style-type: none"> <li>Internal preparations.</li> <li>External preparations.</li> </ul> <p>7. Pharmacodynamics of the key chemical groups in plants.</p> <ul style="list-style-type: none"> <li>Simple phenols and glycosides.</li> <li>Cyanogenic glycosides.</li> <li>Mucilages.</li> <li>Essential oils.</li> <li>Glucosinolates.</li> <li>Flavanoids.</li> <li>Tannins and oligomericprocyanidins (OPC).</li> <li>Resins.</li> <li>Bitters.</li> <li>Pungent constituents.</li> <li>Saponins.</li> <li>Cardiac glycosides.</li> </ul> <p>8. Anthraquinones .</p> <p>9. Coumarins.</p> <p>10. Phytoestrogens.</p> <p>11. Alkaloids.</p> <p>12. ## **2. Medicinal chemistry IV**

<b>Course code</b>	<b>PH5102</b>
<b>Credit hours</b>	3Cr (2+1)
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (28 hours)</li><li>• Practical and tutorials (42 hours)</li></ul>
<b>Objective</b>	At the end of this course the student should be able to: <ul style="list-style-type: none"><li>• Understand the structure activity relationship of various drugs and describe their main functional groups &amp; their interactions with biological systems.</li></ul>
<b>Course contents</b>	<ol style="list-style-type: none"><li>1. Drugs acting on the central nervous system<ul style="list-style-type: none"><li>▪ Anxiolytic, Sedative, and Hypnotic Agents</li><li>▪ Antipsychotics</li><li>▪ Anticonvulsants</li><li>▪ Analectics</li><li>▪ Methylxanthines</li><li>▪ Central Sympathomimetic Agents</li><li>▪ Antidepressants</li><li>▪ Miscellaneous CNS-Acting Drugs</li></ul></li><li>2. Drugs acting on the endocrine system<ul style="list-style-type: none"><li>▪ Disorders of Glucose Metabolism: Diabetes and the Metabolic Syndrome</li><li>▪ Gonadotropins, Gonadotropin-Releasing Hormone, and GNRH Receptor Agonists and Antagonists</li><li>▪ Chemical Contraceptive Agents</li><li>▪ Androgens</li><li>▪ Adrenal Cortex Hormones</li><li>▪ Neurosteroids</li></ul></li></ol>
<b>Practical</b>	Synthesis of simple pharmaceutical compounds
<b>Evaluation</b>	<ul style="list-style-type: none"><li>• Class tests, Seminars and Practical work 20%</li><li>• Mid-semester examination 20%</li></ul> End semester examination 60%
<b>References</b>	<ul style="list-style-type: none"><li>• Foye WO. Foye's principles of medicinal chemistry. Lippincott Williams &amp; Wilkins; 2008.</li><li>• Woster PM. --	---

<b>3.Forensic pharmacy</b>	
<b>Course code</b>	<b>PH5103</b>
<b>Credit hours</b>	• 3Cr (3+0)
<b>Contact hours</b>	Lectures (42hours)
<b>Objectives</b>	<p>At the end of this course students should be able to:</p> <ul style="list-style-type: none"> <li>• Familiarize with the Sudanese pharmacy law.</li> <li>• Define and explain laws governing control of narcotics and psychotropic drugs.</li> <li>• Identify and define drug abuse.</li> <li>• Acquire skills and knowledge on how to prevent and control drug abuse.</li> </ul>

<b>Course content</b>	<ul style="list-style-type: none"> <li>• Definitions:</li> <li>• Law constitution, Statute and act, Ordinance, Curts and felony, Treaty and convention.</li> <li>• Sudanese Pharmacy and Poisons Act (the most recent) Control of Narcotic Drugs.</li> <li>• The Convention on psychotropic substances (Vienna convention1971).</li> <li>• The drugs and prevention of illicit traffic in Drugs (Its aims).</li> <li>• Definition and classification of the major psychoactive substances.</li> <li>• Tobacco and alcohol - effects/common complications.</li> <li>• The Pharmacist and control of psychoactive substances.</li> <li>• Preventive education against substance abuse.</li> <li>• Opiates, cocaine and cannabis.</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Class tests and year work (Tutorials &amp; Assignments) 20 marks</li> <li>• End semester examination, one three hours paper 80 marks</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• Alfadl AA, Ali GK, Yousif MA, Babekir MF. Pharmacy practice in Sudan. InPharmacy Practice in Developing Countries 2016 Jan 1 (pp. 319-341). Academic Press.</li> <li>• Kokate CK, Gokhale SB. Textbook of Forensic Pharmacy. 5th Ed. Edward Arnold; 1959.</li> <li>• Control of Narcotics Substances Act; 1997.</li> </ul>

#### **4. Molecular Biology and Biotechnology**

<b>Course code</b>	<b>PH5104</b>
<b>Credit hours</b>	<b>3 Cr (3+0)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"><li>Lectures (42 hours)</li></ul>
<b>Objective</b>	<ul style="list-style-type: none"><li>By the end of this course the students should be able to:</li><li>Understand the nature of DNA and RNA and its building blocks, organization and nature of chromosomes &amp; cell division</li><li>Understand that DNA is the carrier of genetic information.</li><li>Understand the basis of the flow of genetic information.</li><li>Understand the mode of action of some drugs that interfere at the level of gene expression.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>The biosynthesis of nitrogenous bases, nucleosides and nucleotides, gout and therapeutics. DNA structure, DNA organization, the chromosome, RNA structure, types and roles.</li><li>The cell cycle, replication, antimetabolites, anticancer agents.</li><li>RNA synthesis, the genetic code, protein biosynthesis antibiotics as inhibitors of replication, transcription or translation. Gene regulation,</li><li>Genetic engineering, molecular techniques, plasmids, bacteriophages, cosmids, vectors, genomic libraries, shotgun cloning, screening genetic libraries. Optimizing expression of recombinant genes, transcription and translation. PCR, applications and limitations.</li><li>Biotechnology in the pharmaceutical industry, recombinant human insulin, somatostatin, growth hormones, hepatitis B- vaccine and recombinant antibiotics. Recombinant DNA in diagnosis of infectious diseases, genetic disorders, gene therapy and transgenic organisms.</li></ul>
<b>Evaluation</b>	<ul style="list-style-type: none"><li>Mid exam, Assignment, lab related activities 30%</li><li>Assignment 10%</li><li>Final exam 60%</li></ul>
<b>References</b>	<ul style="list-style-type: none"><li>Bradley JR, Johnson D, Rubenstein D. Lecture notes on molecular medicine. Wiley-Blackwell; 2001 Oct 18.</li><li>Denyer SP, Hodges NA, Gorman SP, editors. Hugo and Russell's pharmaceutical microbiology. John Wiley &amp; Sons; 2008 Apr 15. Pharmaceutical Press</li></ul>

## **5. Research Project**

<b>Course code</b>	<b>PH5105</b>
<b>Credit hours</b>	<b>2 Cr (2+0)</b>
<b>Objectives</b>	<ul style="list-style-type: none"><li>• By the end of research project, the students should be able to:</li><li>• Carry out a research project in one of the pharmaceutical field.</li><li>• To plan, execute &amp; report a research project.</li><li>• Collect the data</li><li>• Analyze the result, discuss and interpret the findings</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>• Setting research plan.</li><li>• Gathering up-to-date literature review.</li><li>• Analysis of data.</li><li>• Presentation skills and tools.</li><li>• Writing Process.</li><li>• Elements of the Scientific Research Paper.</li><li>• Citation style.</li><li>• Referencing soft ware</li></ul>
<b>Evaluation</b>	A discussion committee will evaluate the following: <ul style="list-style-type: none"><li>• Research thesis</li><li>• Research project presentation</li></ul> <p>*The form used in thesis evaluation has been attached to the appendix section.</p>

## **6. Clinical pharmacy II:**

<b>Course code</b>	<b>PH5106</b>
<b>Credit hours</b>	<b>4Cr (3+1)</b>
<b>Contact hours</b>	<ul style="list-style-type: none"><li>• Lectures (42 hours)</li><li>• Practical and tutorials (42 hours)</li></ul>
<b>Objective:</b>	<ul style="list-style-type: none"><li>• At the end of this course the student should be able to:</li><li>• Obtain medical information from the patient and medical notes.</li><li>• Interpret clinical data including: laboratory investigations and clinical observations.</li><li>• Demonstrate appropriate communication skills.</li><li>• Prepare appropriate pharmaceutical care plans for targeted patients.</li></ul>
<b>Course content</b>	<ul style="list-style-type: none"><li>• The role of the pharmacist in managing hospitalized patients.</li><li>• The components of patients case notes.</li><li>• Communication skills: structure of patient interview, counselling patients, interaction with patients, relatives and healthcare professionals. Written skills required to develop patient information leaflets. IT skills required for, retrieving information from the internet,</li></ul>

	<p>textbooks and journals. Skills in preparing and delivering oral presentations and written presentations.</p> <ul style="list-style-type: none"> <li>General aspects of Pharmaceutical care plans: Drug history taking, medication and patient risk factors, retrieval of information from medical notes, medical terminology, common medical abbreviations, subjective and objective evaluation of the patient, critical review of prescriptions and medication charts.</li> <li>Pharmaceutical issues and problems in major therapeutic areas. Discuss indications, adverse drug reactions, contraindications and drug interactions of drugs used in the treatment of these diseases. Clinical use of drugs, choice of drugs, treatment algorithms, patient monitoring, care, counselling and self management plans where appropriate.</li> <li>Clinical pharmacy hospital visits: Students must attend a mini-ward round in the company a clinical pharmacist to meet selected patients and to become familiar with the ward environment and the locations and layout of patient notes. Students are divided into small groups of to study relevant patient cases and formulate pharmaceutical care plans. Findings must be reported back to the whole group and tutors.</li> </ul>
<b>Course content:</b>	<p><b>A. Lectures</b></p> <ul style="list-style-type: none"> <li>Stroke</li> <li>Acute renal failure- Pathophysiology&amp;Management</li> <li>Chronic renal failure- Pathophysiology&amp;Pharmacotherapy</li> <li>Chronic Obstructive Pulmonary Disease</li> <li>Principles of antimicrobial therapy</li> <li>Tuberculosis</li> <li>Human Immunodeficiency Virus- Pathophysiology</li> <li>Liver disorders – Causes and pathophysiology&amp;Pharmacotherapy</li> <li>Introduction to psychiatric diseases</li> <li>Anxiety disorders</li> <li>Schizophrenia</li> <li>Affective disorders</li> <li>Epilepsy</li> <li>Parkinson’s disease</li> <li>Management of Pain</li> <li>Breast cancer</li> </ul> <p><b>B. Seminars</b></p> <ul style="list-style-type: none"> <li>Principles of antibiotics prescribing</li> <li>Tuberculosis</li> <li>Tropical Diseases</li> <li>Psychiatric diseases</li> <li>Complications of cancer chemotherapy</li> <li>Status epilepticus</li> </ul> <p><b>C. Tutorials</b></p> <ul style="list-style-type: none"> <li>Liver disorders</li> <li>Peptic ulcer disease</li> <li>Renal failure</li> </ul>

	<ul style="list-style-type: none"> <li>• Asthma</li> <li>• COPD</li> <li>• Infections</li> <li>• Rheumatoid Arthritis</li> <li>• Tuberculosis</li> <li>• Schizophrenia</li> <li>• Affective disorders</li> <li>• Epilepsy</li> </ul>
	<p><b>D. Hospital Rounds</b></p> <ul style="list-style-type: none"> <li>• Pharmaceutical care of stroke patients</li> <li>• Pharmaceutical care of surgical patients- pain management, antibiotic prophylaxis and per-surgical therapies</li> <li>• Endoscopy techniques</li> <li>• Liver patient</li> <li>• Renal replacement therapies</li> <li>• Pharmaceutical care of patients on dialysis</li> <li>• Pharmaceutical care of asthma patients</li> <li>• Pharmaceutical care of Psychiatric patients</li> <li>• Pharmaceutical care of patients receiving cancer chemotherapy</li> </ul>
<b>Evaluation</b>	<ul style="list-style-type: none"> <li>• Mid exam 20%</li> <li>• Case presentation 20%</li> <li>final exam 60%</li> </ul>
<b>References</b>	<ul style="list-style-type: none"> <li>• DiPiro JT, Talbert RL, Yee GC, Matzke GR, Wells BG, Posey LM, Pharmacotherapy 3rd A. A pathophysiologic approach. Pharmacotherapy. # ملحق (1)

## نموذج تقييم رسالة بحث التخرج لطلاب

## البكالريوس

### **Thesis Evaluation Form (Bachelor Degree)**

<i>Student Name</i>	
<i>Thesis Title</i>	

<b>Section</b>	<b>Grade</b>
<b>Introduction (8 marks):</b> - Does the introduction motivate the goals of the thesis and explain the context of the work? - Does it point to existing solutions and their limitations? - Is the research question formulated clearly, and does the contribution become clear?	
<b>Related Work/Background (12 marks):</b> - Does the thesis describe relevant related work and relevant background information in an appropriate number of words and in sufficient detail?	
<b>Theoretical/Practical Description (12 marks):</b> - Is the proposed solution to the problem well described (e.g., theoretical approach, experiment, implementation)?	
<b>Results/Discussion/Evaluation (20 marks):</b> - Are the obtained results discussed with respect to the original goals of the thesis? - Are the results well discussed and compared to the results of similar approaches?	
<b>Conclusion (8 marks):</b> - Does the conclusion state the results concisely and does it explain their significance? - Does it restate limitations and open questions?	
<b>Formality, Writing Style (12 marks):</b> - Is the thesis well written, easy to read, and does it use appropriate wording? - Are graphs, tables, formulas, etc. well displayed? - Is the overall thesis and the single chapters and paragraphs well-structured? - Are all references cited correctly, and the bibliography formatted properly?	
<b>Thesis presentation (8 marks):</b> - Are the thesis contents well presented? - Student presentation skills	
<b>Thesis supervisor evaluation (20 marks):</b> - Evaluation of student academic and research performance during the research project
